GENERAL NOTES & DESIGN DATA

Specifications :- Louisiana Hwy. Comm. Sept. 1925
Concentrated Load Typical 15 ton truck
Impact Allowance 30 per cent
Paving or ballast Not to exceed 80 lbs per Sq. ft.
Steel in tension 16000 " " Sq. In.
Concrete in compression 650 " " "
Reinforced concrete in shear 110 " " "
The table is based on the net area of bars as follows:
½" φ = 0.25 Sq. in. · 1⅛" φ = 1.2656 Sq. In. - 1¼" φ = 1.5625 Sq. In.

Concrete to be of the following Mixture { 1:2:4 Mix. when used with gravel paving. 1:2:3 Mix. when used with Concrete wearing Surface }
Maximum size of aggregate - 1½"
All reinforcing steel shall be deformed bars (Square twisted bars not to be considered as deformed)
All dimensions relating to reinforcement are to centers of bars.
Where splicing of reinforcement is necessary bars are to be lapped 40 diameters.
All exposed corners (except as indicated) to be chamfered thus:
Railings designed to suit local conditions to be placed on Curbs where necessary, and provision made therefore when pouring Curb. for types of railing see Drawing No. G-211
Curbs, slab and beam-stems must be poured at same time allowing no time for initial set to take place between them.
