June 2, 2026

**RE: CONTRACT NOS. 4400035221, 4400035387, AND 4400035388
IDIQ CONTRACTS FOR ENVIRONMENTAL IMPACT ASSESSMENT AND REMEDIATION
STATEWIDE**

Louisiana Department of Transportation and Development
1201 Capitol Access Road
Baton Rouge, LA 70802-4438

Dear Ms. Thibodeaux and Project Evaluation Team,

G.E.C., Inc. (GEC) is pleased to present our enclosed statement of qualifications for the Environmental Impact Assessment and Remediation Statewide IDIQ. Our team includes the following teaming partners to perform services necessary for the identification, quantification, and remediation of areas posing risk of environmental impact at proposed sites, as needed, throughout the State:

- **GEC (PRIME)**
- **Koury Environmental Services, LLC**
- **Petro Plus Construction**

Led by GEC's Bijan Sharafkhani, a professional engineer with 43 years of civil and environmental engineering experience, this team has been assembled with the goals and needs of this IDIQ contract in mind. Bijan serves as Vice President of GEC's Environmental Industrial Division, and has served with the Louisiana Department of Environmental Quality (LDEQ) for more than 33 years as an engineer in the Waste Division, engineering supervisor, engineering manager, Division Administrator, and finally Confidential Advisor to the Secretary prior to joining GEC. In these various positions, he has established himself as a recognized authority in solid & hazardous waste, superfund, remediation of contaminated sites, permitting, design, construction, assessment, and management. **Mr. Sharafkhani was also one of the founders of the Louisiana RECAP program for risk-based evaluation and corrective action.**

We look forward to the opportunity to support LADOTD on this IDIQ contract and appreciate the Committee's review of our extensive qualifications.

Sincerely,

G.E.C., Inc.

Chuck Carr Brown, PhD
Senior Vice President, Environmental Industrial Division

Celebrating 40 years of **PROGRESS DELIVERED**

SF 24-102 SECTIONS

01-13

AGRICULTURE STREET LANDFILL SUPERFUND SITE REDEVELOPMENT

Client: City of New Orleans

GEC provided engineering, environmental remediation, and site restoration activities across 80+ residential properties and surrounding impacted greenspaces associated with the Former Agriculture Street Landfill Site in New Orleans, Louisiana.

The project included environmental planning, regulatory coordination, remedial oversight, construction coordination, health and safety implementation, waste characterization, confirmatory sampling, data analysis, and preparation of comprehensive regulatory documentation.

DOTD FORM: 24-102

(Revised August 11, 2025)

PROPOSAL TO PROVIDE CONSULTANT SERVICES

Prime consultant shall complete the DOTD Form 24-102 without altering the Form's text; however, the instruction and/or guidance for Sections 12 through 23 can be removed but do not remove Section title and number.

ANY CONSULTANT FAILING TO SUBMIT ANY OF THE INFORMATION REQUIRED ON THE DOTD FORM 24-102, OR PROVIDING INACCURATE INFORMATION ON THE DOTD FORM 24-102, MAY BE CONSIDERED NON-RESPONSIVE.

1. Contract Name as shown in the advertisement	IDIQ CONTRACTS FOR ENVIRONMENTAL IMPACT ASSESSMENT AND REMEDIATION STATEWIDE
2. Contract Number(s) as shown in the advertisement	4400035221, 4400035387, AND 4400035388
3. State Project Number(s), if shown in the advertisement	N/A
4. Prime consultant name (name must match <u>exactly</u> as registered with the Louisiana Secretary of State (SOS) where such registration is required by law; including punctuation; <u>include screenshot from SOS at the end of Section 20</u>)	G.E.C., Inc.
5. Prime consultant license number (as registered with the Louisiana Professional Engineering and Land Surveying Board (LAPELS) if registration is required under Louisiana law)	EF.0001917
6. Prime consultant mailing address	8282 Goodwood Blvd., Baton Rouge, LA 70806
7. Prime consultant physical address (existing or to be established, if location is used as an evaluation criteria)	8282 Goodwood Blvd., Baton Rouge, LA 70806
8. Name, title, phone number, and email address of prime consultant's contract point of contact	Chuck Carr Brown, PhD, Senior Vice President, (225) 612-4140, cbrown@gecinc.com
9. Name, title, phone number, and email address of the official with signing authority for this proposal	Chuck Carr Brown, PhD, Senior Vice President, (225) 612-4140, cbrown@gecinc.com

Prime consultant should enter the firm name in the footer at the bottom of this page. (It will carry over to subsequent pages.)

G.E.C., INC.

10. This is to certify that all information contained herein is accurate and true, and that the team presently has sufficient staff to perform these services within the designated time frame. By submitting this proposal, proposer certifies that it is not engaged in a boycott of Israel and it will, for the duration of its contract obligations, refrain from a boycott of Israel. Proposer also certifies and agrees that the following information is correct: In preparing its response, the proposer has considered all proposals submitted from qualified, potential subcontractors and suppliers, and has not, in the solicitation, selection, or commercial treatment of any subcontractor or supplier, refused to transact or terminated business activities, or taken other actions intended to limit commercial relations, with a person or entity that is engaging in commercial transactions in Israel or Israeli-controlled territories, with the specific intent to accomplish a boycott or divestment of Israel. The proposer also has not retaliated against any person or other entity for reporting such refusal, termination, or commercially limiting actions. DOTD reserves the right to reject the response of the bidder or proposer if this certification is subsequently determined to be false, and to terminate any contract awarded based on such a false response.

Pursuant to Act No. 581 of the 2024 Louisiana Legislature Regular Session, proposer further certifies that it does not have a practice, policy, guidance, or directive that discriminates against a firearm entity or firearm trade association based solely on the entity's or association's status as a firearm entity or firearm trade association. In addition, proposer certifies it will not discriminate against a firearm entity or firearm trade association during the term of the contract based solely on the entity's or association's status as a firearm entity or firearm trade association.

Signature above shall be the same person listed in Section 9:

INJECTION WELL WORKOVER

Client: LADOTD

GEC is providing comprehensive technical, operational, and environmental support for an industrial waste injection well system in Louisiana, including permitting, design support, installation oversight, and troubleshooting. The work spans the full lifecycle of the well, from initial commissioning through remediation and reconstruction. GEC is also addressing challenges such as scaling, plugging, and injectivity loss to restore and enhance performance. Support services also includes regulatory coordination, contractor management, and data-driven evaluations to enable reliable, long-term operation under demanding field conditions.

	<i>Chuck Carr Brown, Ph.D. is Senior Vice President of GEC's Environmental Industrial Division. Dr. Brown, a dedicated promoter of comprehensive environmental protection in Louisiana, has 46 years of experience and a history of ensuring a clean and healthy environment for present and future generations. He is responsible for the overall growth of the firm's Environmental Industrial Division, along with developing new business opportunities and creating customized solutions for industrial clients. Most recently, Dr. Brown served as Secretary of the Louisiana Department of Environmental Quality (LDEQ), responsible for leading 715 employees and 6 regional offices with an annual budget of \$127 Million. Dr. Brown also served in the following roles prior to his role as Secretary of LDEQ: Special Research Scientist for Exxon Mobil Chemical Company for over 20 years, former Vice President of Environmental Affairs Division for Franklin Industries, LLC, former Vice President of Metro Services Group, LLC, President and CEO of Brown and Associates, LLC, and Vice President of the Environmental Council of the States (ECOS), an organization whose membership comprises environmental regulators and professionals from across the United States. Research has shown that Dr. Brown is the first African American to serve in this capacity in Louisiana, only the third African American to serve in a similar position in the United States, and the first African American to be elected to an executive leadership position with ECOS.</i>			
01/16-03/23	LOUISIANA DEPARTMENT OF ENVIRONMENTAL QUALITY: Baton Rouge, Louisiana. Secretary - Responsible for facilitating the Department's Mission of providing service to the people of Louisiana through comprehensive environmental protection in order to promote and protect health, safety and welfare while considering sound policies regarding employment and economic development with a Vision of being a respected steward of the State's environment. Additionally, responsible for ensuring that the citizens of Louisiana have a clean and healthy environment to live and work in for present and future generations by regulating pollution sources, providing permitting activities consistent with laws and regulations, providing interface between the department and businesses and customers, conducting Inspections of permitted facilities and activities, responding to environmental emergencies, issuing sound enforcement actions when needed and supplying the resources to focus on the issues with the highest potential for environmental impact. All of which have National and International implications.			
04/13-01/16	METRO SERVICE GROUP, LLC: New Orleans, Louisiana. Vice President - Responsible for managing all environmental and environmental affairs issues, small community concerns, public participation and public outreach initiatives on all projects proposed by the Metro Service Group. The Metro Service Group is responsible waste collection within the City of New Orleans and served as one of the prime contractors during the construction of the City's new International Airport.			
03/04- 01/08	LOUISIANA DEPARTMENT OF ENVIRONMENTAL QUALITY: Baton Rouge, Louisiana. Assistant Secretary Office of Environmental Services - Responsible for the issuance of all air, water, and waste permits within the State of Louisiana. Responsible for regulating pollution sources; conducting permitting activities consistent with laws and regulations, providing an interface between the department, businesses and customers; providing outreach and educational materials to the public and businesses related to pollution, manifests, recycling, and litter; providing environmental assistance and improved public participation to small businesses, schools, supporting a complaints hotline, supporting community and industrial relations, providing technical guidance for permit applications; conducting permit tracking; and supplying the resources to focus on applications with highest potential for environmental impact. Additionally, while facilitating a 22-million-dollar budget and managing 216 employees, all permitting backlogs were eliminated, the creation of an expedited permitting program was achieved, and the statewide regionalization of wastewater treatment was initiated. 	Mr. Sharafkhani serves as Vice President of GEC's Environmental Industrial Division. He is a licensed professional engineer in Louisiana with 43 years of experience in civil and environmental engineering fields. Prior to GEC, he served with the Louisiana Department of Environmental Quality (LDEQ) for more than 33 years as an engineer in the Waste Division, engineering supervisor, engineering manager, Division Administrator, and finally Confidential Advisor to the Secretary. In these various positions, he has established himself as a recognized authority in solid & hazardous waste, superfund, remediation of contaminated sites, permitting, design, construction, assessment, and management. He has successfully overseen numerous projects that demonstrate his ability to navigate complex regulatory frameworks, develop innovative solutions, identify potential risks, implement effective safety measures, and address various environmental challenges. Mr. Sharafkhani was one of the original team members who developed Risk Evaluation/Corrective Action Program (RECAP), the State of Louisiana's clean up standards for contaminated soil and groundwater. He is also certified in 40 hrs Hazardous Waste Operation & Emergency Response.			
2016-02/2023	LOUISIANA DEPARTMENT OF ENVIRONMENTAL QUALITY (LDEQ): Baton Rouge, LA. Confidential Advisor to the Secretary - Advised the Secretary on policy decisions, permitting, enforcement, regulatory and technical issues, legislative matters, and on short- and long-term planning.			
2006 – 2008	LOUISIANA DEPARTMENT OF ENVIRONMENTAL QUALITY (LDEQ): Baton Rouge, LA. Business, Community Outreach and Incentive Division, Administrator - Responsible for overall Division activities, including: - Cleanwater State Revolving Loan Program, which provides low interest loan to governmental entities for wastewater improvement projects. Once the loan is approved, the recipient is required to meet all engineering, financial, legal and construction requirements. - Nonpoint Source Pollution Program, where the mission is to either fully or partially restore waterbodies that are impaired by non-point source pollution. - Small Business/Small Community Compliance Assistance Program, which provides environmental regulatory/permitting assistance to small businesses and municipalities.			
2006 – 2008	LOUISIANA DEPARTMENT OF ENVIRONMENTAL QUALITY (LDEQ): Baton Rouge, LA. Waste Division Administrator - As Administrator, he was ultimately responsible for overall activities of the Division. These activities included permitting decisions for all solid and hazardous facilities in the state, water quality certification, corrective measures for solid and hazardous facilities, and trial burns for incinerators, boilers, and industrial furnaces.			
2000-2006	LOUISIANA DEPARTMENT OF ENVIRONMENTAL QUALITY (LDEQ): Baton Rouge, LA. Engineer Manager, Technology Division - Mr. Sharafkhani was responsible for all engineering recommendations/decisions relating to design, construction and monitoring all solid waste facilities and hazardous waste landfills, and responsible for engineering recommendations associated with soil and groundwater remediation resulting from underground/above ground storage tanks and pipeline leaks.			
1995-2000	LOUISIANA DEPARTMENT OF ENVIRONMENTAL QUALITY (LDEQ): Baton Rouge, LA. Engineer Manager, Permits Section, Solid Waste Division - As Permits Section Manager, he was ultimately responsible for all decisions and recommendations made by this Section to the Division Administrator relating to permitting, construction, monitoring remediation of all solid waste facilities.			
1988-1995	LOUISIANA DEPARTMENT OF ENVIRONMENTAL QUALITY (LDEQ): Baton Rouge, LA. Engineer/Engineer Supervisor, Solid Waste Division - Mr. Sharafkhani performed and oversaw the engineering reviews associated with permitting, closure and design/construction of all solid waste facilities.

NAME	Michael Simms, PhD, PG	YEARS OF RELEVANT EXPERIENCE WITH THIS EMPLOYER	3
TITLE	Professional Geologist	YEARS OF RELEVANT EXPERIENCE WITH OTHER EMPLOYER(S)	38
DEGREE(S) / YEARS / SPECIALIZATION		B.A. / 1977 / Earth and Planetary Sciences (Geology); M.A. / 2002 / Earth and Planetary Sciences (Hydrogeology); Ph.D. / 2011 / Earth and Planetary Sciences (Hydrogeology)	
ACTIVE REGISTRATION NUMBER / STATE / EXPIRATION DATE		1142 / Louisiana / 06-13-2026	
YEAR REGISTERED	2008	DISCIPLINE	Geology
CONTRACT ROLE(S) / BRIEF DESCRIPTION OF RESPONSIBILITIES		Role on this Project: Environmental	
EXPERIENCE DATES (MM/YY-MM/YY)	EXPERIENCE AND QUALIFICATIONS RELEVANT TO THE PROPOSED CONTRACT; I.E., "DESIGNED DRAINAGE", "DESIGNED GIRDERS", "DESIGNED INTERSECTION", ETC. EXPERIENCE DATES SHOULD COVER THE YEARS OF EXPERIENCE SPECIFIED IN THE APPLICABLE MPR(S).		
	<i>Dr. Michael Simms is a hydrogeologist with more than 40 years of experience in subsurface geologic assessment, groundwater assessment, remediation, groundwater modeling, and groundwater resource evaluation. His primary areas of expertise include groundwater modeling, CO2 sequestration, groundwater geochemistry, remediation of groundwater, Louisiana geology, geomechanics, and hydrogeologic investigations. He is a licensed Professional Geologist in Louisiana, Texas, and Mississippi. Dr. Simms earned his Doctorate of Philosophy in Earth and Planetary Sciences (Hydrogeology and Geochemistry) from Johns Hopkins University, and holds Bachelor's and Master's degrees in Earth and Planetary Sciences for Geology and Hydrogeology, respectively. He is chairman and member of the Louisiana Geological Survey State Geologic Mapping Advisory Committee and Chair of the Louisiana Board of Professional Geoscientists.</i>		
07/23-11/25	REMEDIATION OF GROUNDWATER: Baton Rouge, LA. Geologist - Assessment of groundwater impacts and implementation of remediation including groundwater recovery, in-situ chemical oxidation, and monitored natural attenuation, and air sparging. Risk-based corrective action for soil and groundwater including application of the Louisiana RECAP requirements.		
06/24- 05/26	CO2 RISK ASSESSMENT: Louisiana. Geologist - Evaluations of containment risks and operations risks for CO2 sequestration in Allen Parish, St. Landry Parish, Rapides Parish, and Iberville Parish to assess risks related to planned sequestration projects.		
2007 – 2010	GEOLOGIC INVESTIGATION OF SUBSURFACE SOILS: New Orleans, LA. Senior Project Hydrogeologist - Dr. Simms was Senior Project Hydrogeologist for the project and conducted the geologic investigation of subsurface soils and assessment of requirements for hydraulic cutoff and dewatering in principal permeable stratigraphic zones for New Orleans East Levee Reaches LPV 105-111 (from Lakefront Airport to Michoud). The project data included 103 soil boring logs, 248 cone penetrometer tests, and geophysical data. Dr. Simms planned and installed 20 piezometers in shallow sand and silt zones in the Holocene deltaic and coastal deposits for continuous monitoring of hydraulic head to assess seepage potential beneath the levee reaches. Dr. Simms conducted the geologic and stratigraphic interpretation of soil boring logs, CPTs, and geophysical data with geologic cross sections along and transverse to the levees. Work done prior to GEC.		
2019-2020	ASSESSMENT OF FAULTING, MID-BARATARIA SEDIMENT DIVERSION: Louisiana. Project Manager - As Project Manager, Dr. Simms conducted an assessment of the potential for near-surface faulting at the project site using the project geotechnical boring logs, petroleum industry seismic data, and geophysical well logs to assess the configuration of the Pleistocene surface and the distribution of Holocene sedimentary facies. Two-dimensional seismic data in the site area was reviewed to identify the locations of growth faulting and the subsurface stratigraphy was correlated to independently identify faulting. Work done prior to GEC.		
2017	SUBSIDENCE CONDITIONS EVALUATION OF POWER PLANT SITE: New Orleans, LA. Geologist - Dr. Simms evaluated potential subsidence conditions at a power plant site in New Orleans East. The work included geologic characterization from the surface to the Gonzales-New Orleans aquifer and 1,200-Foot Sand with well logs, correlation of subsurface units, evaluation of historical subsidence in the New Orleans area, review of published InSAR data on surface displacements, and assessment of subsidence related to past and proposed groundwater withdrawals. The potential for compaction and subsidence processes was estimated from modeled groundwater hydraulic head drawdowns and subsurface geotechnical properties. Work done prior to GEC.

NAME	Ashlyn Harmon, PhD		YEARS OF RELEVANT EXPERIENCE WITH THIS EMPLOYER	1
TITLE	Environmental Scientist / Toxicologist		YEARS OF RELEVANT EXPERIENCE WITH OTHER EMPLOYER(S)	15
DEGREE(S) / YEARS / SPECIALIZATION		B.S. / 2008 / Forensic Science (Chemistry & Biochemistry); M.S. / 2010 / Forensic Science – Toxicology (Chemistry & Biochemistry); M.S. / 2012 / Biomedical Sciences; Ph.D. / 2015 / Pharmacology and Toxicology		
ACTIVE REGISTRATION NUMBER / STATE / EXPIRATION DATE		N/A		
YEAR REGISTERED	N/A	DISCIPLINE	N/A	
CONTRACT ROLE(S) / BRIEF DESCRIPTION OF RESPONSIBILITIES		Role on this Project: Environmental		
EXPERIENCE DATES (MM/YY-MM/YY)	EXPERIENCE AND QUALIFICATIONS RELEVANT TO THE PROPOSED CONTRACT; I.E., “DESIGNED DRAINAGE”, “DESIGNED GIRDERS”, “DESIGNED INTERSECTION”, ETC. EXPERIENCE DATES SHOULD COVER THE YEARS OF EXPERIENCE SPECIFIED IN THE APPLICABLE MPR(S).			
	<i>Dr. Harmon is an environmental scientist in GEC’s Environmental Division. She has 16 years of professional research and project management experience spanning environmental toxicology, biomedical sciences, and pharmacology. Ms. Harmon has spent nearly the last 5 years as a research assistant professor at Louisiana State University where she was a member of the LSU Superfund Research Program. Her research focused on investigating the role of particulate matter exposures in the development and exacerbation of cardiopulmonary diseases. She has been a member of the Society of Toxicology for the past 10 years and has served in various leadership roles for the South-Central Chapter.</i>			
2024-Present	CITY OF NEW ORLEANS – AGRICULTURE STREET LANDFILL SUPERFUND SITE REDEVELOPMENT: New Orleans, LA. <i>Environmental Scientist</i> - GEC was selected to provide engineering and environmental services for the Agriculture Street Landfill Superfund Site Redevelopment in New Orleans East. In the efforts to redevelop the site into a community solar farm, assistance includes oversight and project management for the demolition of the residential homes including asbestos abatement, along with the implementation of the remedial action by removing contaminated soil, installation of a geotextile liner at the base of excavation prior to placing appropriate backfill, installing vegetative cover, and contaminated soil/material disposal. The remedial actions were conducted in accordance with a Remedial Action Plan and a Soil Management Plan that were prepared by GEC and approved by the City of New Orleans and EPA Region 6. As part of the remedial action, GEC also prepared a Tree Maintenance Plan and a Best Management Practices Plan that were approved by the City of New Orleans, EPA Region 6, and the Louisiana Department of Agriculture and Forestry. GEC is preparing the final Remedial Action Report and all necessary close-out reports to remove the site from the National Priorities List. GEC is also assisting with the solar assessment, preliminary design, and will assist with the RFP preparation, project development, and oversight through construction of the community solar farm.			
10/2024-Present	SOUTHWEST ARKANSAS RED RIVER NAVIGATION SECTION 203 EIS: Arkansas and Louisiana. <i>Environmental Scientist</i> - GEC prepared an environmental impact study (EIS) for the proposed Red River water resources development project that will extend shallow draft navigation 135 miles from Shreveport, LA to Southwest Arkansas. This EIS examined the affected area of the proposed project and addressed environmental concerns such as air quality, cultural resources, socioeconomics, transportation, floodplains and flood control, water supply and use, and hazardous, toxic, and radioactive waste (HTRW). The purpose of these studies was to identify any environmental impacts, beneficial or adverse, resulting from the extension of the shallow draft navigation and present them in a clear and concise manner.			
10/2024-2025	GREENPOINT, INC. – SOLID WASTE PERMIT MAJOR MODIFICATION: Broussard, LA. <i>Environmental Scientist</i> - Assisted with a solid waste permit major modification application to expand the existing landfill, revise existing final cover slope, and change the frequency of interim cover placement. Permitting activities included revisions to the master plan, cross-sectional drawings, the operational plan, closure plan and closure costs, environmental assessment statement (IT Questions), and the logging of a test pit to evaluate the subsurface and demonstrate natural soil permeability.			
2024-2025	WESTLAKE CHEMICALS & VINYL, LLC - SOLID WASTE PERMIT RENEWAL APPLICATION: Assumption Parish, LA. <i>Environmental Scientist</i> - Assisted with the preparation of a solid waste permit renewal application for Westlake’s Grand Bayou Type I-A Brine Precipitate Processing Facility. Permitting activities included preparation of the solid waste permit renewal application and review and update of the emergency response plan, operational plan, and closure/post closure costs.

2024 - 2026	INTERNATIONAL MATEX TANK TERMINAL: St. Rose Facility, St. Rose, LA. Geologist - Providing continued assistance with the closure of a tank release to soil and groundwater utilizing the LDEQ's RECAP Management Options.		
2025	WSP USA – PIPELINE RELEASE SOIL SAMPLING: Iberville Parish, LA. Geologist - GEC was requested to assist with a brine pipeline release in Iberville Parish. Prior to sampling, GEC conducted a preliminary site visit to develop appropriate soil sampling locations and prepared a Soil Sampling Work Plan that was approved by the LDEQ. GEC collected soil samples utilizing hand auger techniques in accordance with the approved Work Plan. Once analytical results were received, GEC prepared a Soil Sampling Report documenting the sampling procedures and the analytical results.		
2025 - Present	LOUISIANA DEPARTMENT OF TRANSPORTATION AND DEVELOPMENT – CALCASIEU RIVER BRIDGE (HBI) (CE&I) ROUTE: I-10: Calcasieu Parish, LA. Geologist - GEC provides environmental compliance assistance to support project development, due diligence, and regulatory decision-making efforts. Services include technical review of environmental compliance and mitigation plans to evaluate consistency with applicable federal, state, and local regulatory requirements, permitting conditions, and industry best practices. GEC also provides technical review of environmental documents such as Phase I and Phase II Environmental Site Assessments (ESAs) to evaluate recognized environmental conditions, site characterization data, potential environmental liabilities, and overall project risks. Based on review findings, GEC develops recommendations regarding appropriate paths forward, such as additional investigation, regulatory coordination, mitigation strategies, remediation considerations, and other project-specific compliance actions necessary to support informed decision-making and successful project advancement.

EXPERIENCE DATES (MM/YY–MM/YY)	EXPERIENCE AND QUALIFICATIONS RELEVANT TO THE PROPOSED CONTRACT; I.E., “DESIGNED DRAINAGE”, “DESIGNED GIRDERS”, “DESIGNED INTERSECTION”, ETC. EXPERIENCE DATES SHOULD COVER THE YEARS OF EXPERIENCE SPECIFIED IN THE APPLICABLE MPR(S).		
	<i>Mr. Grant has over 29 years’ experience in the environmental field conducting research, regulatory compliance and enforcement, planning, coordination, and consulting services on federal and state regulatory compliance issues for numerous governmental and private clients. Mr. Grant has successfully worked with the Louisiana Department of Agriculture and Forestry (LDAF), the Louisiana Department of Natural Resources (LDNR), and the Louisiana Department of Environmental Quality (LDEQ) on hazardous material sites for several clients. Mr. Grant has experience conducting site investigations in accordance with LDEQ’s Risk Evaluation/Corrective Action Program (RECAP) and Underground Storage Tank Closure/Change-In Service Guidance Document requirements. Mr. Grant is a certified pesticide research and demonstration investigator and holds 40-hour HAZWOPER certification. His experience extends into wetlands delineation and quality, impact analysis, mitigation as well as performing invasive plant species surveys, over 200 Phase I and II ESAs, RECAP UST site investigations, noise and air analyses, permitting, surveying, operation, impact analysis, and mitigation on over 2,500 acres of wetland mitigation banks, conservation easements, and servitudes.</i>		
01/02 – 12/10	THE TIMED PROGRAM, ENVIRONMENTAL: LA. Environmental Scientist - Conducted multiple Phase I Environmental Site Assessments on over 260 miles of proposed highway right-of-way prior to acquisition. Prepared a Phase I Environmental Site Assessment Report according to ASTM E1527-00 for each of 48 highway segments noting recognized environmental conditions within each segment. Development of FSPs, coordination and management of field work and subcontractors on over 150 sites with recognized environmental conditions within proposed highway right-of-way. Preparation of ASTM Phase II Environmental Site Assessment reports in accordance with ASTM International Standard E 1903-97, Standard Practice for Environmental Site Assessments: Phase II Environmental Site Assessment Process citing nature and extent of recognized environmental conditions for each site. Development and execution of further investigation plans for numerous sites.		
2022	PHASE I ENVIRONMENTAL SITE ASSESSMENT, ATALCO GRAMERCY OPERATIONS: Gramercy, LA. Pangaea Conservation and Compliance - Conducted an ASTM E 1527-13 Phase I Site Assessment at an industrial facility located in Gramercy, LA for potential offsite development by a private client.		
2021	PHASE I ENVIRONMENTAL SITE ASSESSMENT, DELTA BIOFUELS: Jeanerette, LA. Pangaea Conservation and Compliance - Conducted an ASTM E 1527-13 Phase I Site Assessment on 16-acre former ethanol processing facility located in Iberia Parish, LA.		
2022	PHASE II ENVIRONMENTAL SITE ASSESSMENT, ENVIRONMENTAL CONSULTING OF LOUISIANA 25543 HWY 1032: Denham Springs, LA. Environmental Scientist - Conducted the field sampling and reporting for a suspected former C&D disposal site located in Livingston Parish, LA. Soil samples collected via Geoprobe subsurface coring in accordance with La RECAP and ASTM Phase II ESA requirements.		
2022	U.S. ARMY CORPS OF ENGINEERS PHASE II ENVIRONMENTAL SITE ASSESSMENT, SEARS AUTOMOTIVE: Lake Charles, Louisiana. Environmental Scientist- New Orleans District — Managed the field investigation to quantify recognized environmental conditions associated with the adjacent property identified in a Phase I environmental site assessment. Sampled soil via Geoprobe and groundwater via temporary monitoring wells for analysis of chemical constituents and compared the results to RECAP standards and managed the investigation of asbestos containing material and lead-based paint in accordance with ASTM International Standard E 1903-97, Standard Practice for Environmental Site Assessments: Phase II Environmental Site Assessment Process. This assessment was conducted under EPA’s TBA program.		

FIRM EMPLOYED BY G.E.C., Inc.			
NAME	Jason Avant		YEARS OF RELEVANT EXPERIENCE WITH THIS EMPLOYER
TITLE	Environmental Scientist		YEARS OF RELEVANT EXPERIENCE WITH OTHER EMPLOYER(S)
DEGREE(S) / YEARS / SPECIALIZATION		B.S. / 2004 / Natural Sciences (Chemistry and Education minors)	
ACTIVE REGISTRATION NUMBER / STATE / EXPIRATION DATE		N/A	
YEAR REGISTERED	N/A	DISCIPLINE	N/A
CONTRACT ROLE(S) / BRIEF DESCRIPTION OF RESPONSIBILITIES		Role on this Project: Environmental	
EXPERIENCE DATES (MM/YY-MM/YY)	EXPERIENCE AND QUALIFICATIONS RELEVANT TO THE PROPOSED CONTRACT; I.E., "DESIGNED DRAINAGE", "DESIGNED GIRDERS", "DESIGNED INTERSECTION", ETC. EXPERIENCE DATES SHOULD COVER THE YEARS OF EXPERIENCE SPECIFIED IN THE APPLICABLE MPR(S).		
	<i>Mr. Avant is an environmental scientist and lead botanist at GEC. He has over 17 years of experience in coastal plant communities, and has performed extensive field research including wetland delineations, vegetation and habitat surveys, and threatened and endangered species surveys in support of permit applications and NEPA documentation. Mr. Avant's responsibilities also include identification and determination of wetlands and the preparation of reports, client letters, and nationwide general permits. He is also a certified construction inspector with daily tasks including, but not limited to, review of contractor daily work logs, daily inspection reports, production of daily progress reports, and interpretation and enforcement of bid documents and contract provisions. Mr. Avant has completed training in the following areas HAZWOPER 40-hr training and certification, Basic Wetland Delineator Training 404-10 RAPANOS Workshop, Soil and Water Science Short Course, Hydric Soils, Atlantic and Gulf Coastal Plain Regional Supplemental Workshop, Certified Lead Inspector, and Unified Wetland Mitigation Assessment.</i>		
10/21-04/24	I-220/I-20 INTERCHANGE IMP & BAFB ACCESS: Bossier Parish, LA. <i>On-Site Environmental Monitor</i> - Mr. Avant collected pre-project soil samples; conducted air quality monitoring for TSP-Lead during construction; conducted visual assessments of contractor air emissions; observed contractor sample collection; ensured compliance with specifications during hazardous waste and waste water collection, storage, disposal/discharge; inspected contractor compliance with worker training and safety requirements; documented waste shipments and water discharges; filed daily reports; collected post-project soil samples.		
11/21-02/23	PAINTING INSPECTION AND ENVIRONMENTAL MONITORING WITH CONSTRUCTION ENGINEERING AND INSPECTION STATEWIDE US 171: CALCASIEU RIVER BRIDGE REPAIRS (HBI): Calcasieu Parish, LA. <i>On-Site Environmental Monitor</i> - Mr. Avant collected pre-project soil samples; conducted air quality monitoring for TSP-Lead during construction; conducted visual assessments of contractor air emissions; observed contractor sample collection; ensured compliance with specifications during hazardous waste and waste water collection, storage, disposal/discharge; inspected contractor compliance with worker training and safety requirements; documented waste shipments and water discharges; filed daily reports; collected post-project soil samples.		
2011-Present	GNOEC, LAKE PONTCHARTRAIN CAUSEWAY: St. Tammany and Jefferson Parishes, LA. <i>Biologist</i> - Mr. Avant serves as Biologist for improvements to the Causeway. GEC prepares and conducts regulatory Solicitations of Views, prepares responses to regulatory comments/guidance, conducts wetland delineations, prepares wetland/water body survey reports and prepares Coastal Use Permit applications.		
01/02 – 12/10	THE TIMED PROGRAM, ENVIRONMENTAL: Statewide, LA. <i>Field Biologist</i> - Mr. Avant was a Field Biologist responsible for the completion of wetland delineations; threatened and endangered species surveys; and the required permit applications necessary for construction of approximately 250 miles of proposed highway right-of-way required for the highway expansion. He was responsible for preparing findings reports and submitting these reports to the appropriate state and federal agencies for review and concurrence. Also, he assisted other Environmental Scientists with Phase I Site Assessments within the right-of-way and Asbestos Inspections of structures impacted by the proposed construction.		
12/18-06/20	I-10 WIDENING, LA 347 TO ATCHAFALAYA FLOODWAY BRIDGE ROUTE: St. Martin Parish, LA. <i>On-Site Environmental Monitor</i> - Mr. Avant collects pre-project soil samples; conducts air quality monitoring for TSP-Lead during construction; conducts visual assessments of contractor air emissions; observes contractor sample collection; ensures compliance with specifications during hazardous waste and waste water collection, storage, disposal/discharge; inspects contractor compliance with worker training and safety requirements; documents waste shipments and water discharges; files daily reports; collects post-project soil samples.		

FIRM EMPLOYED BY G.E.C., Inc.

	<i>Mr. McCoy has 35 years of experience within the environmental resources field. His experience includes wildlife hazard assessments, wetland delineations, threatened and endangered species surveys, Habitat Evaluation Procedures (HEP), preparation of numerous National Environmental Policy Act (NEPA) documents, environmental Phase I site assessments, and hazardous, toxic, and radioactive waste investigations. Mr. McCoy has participated in a Basic Wetland Delineation class conducted by the Wetland Training Institute and a Wetland Plant Identification Workshop conducted by the Wetland Biogeochemistry Institute of Louisiana State University. He has also attended the Wetland Delineation Preparatory course for the Wetland Delineator Certification Program provided through the Wetland Training Institute. Other classes attended by Mr. McCoy include a Habitat Evaluation Procedures Course, and a 40-Hour Waste Site Operations Course along with annual refresher courses.</i>			
01/02-12/10	THE TIMED PROGRAM, ENVIRONMENTAL: Statewide, LA. Lead Field Biologist - Mr. McCoy was responsible for the completion of wetland delineations; threatened and endangered species surveys; and the required permit applications necessary for construction of approximately 250 miles of proposed highway right-of-way required for the highway expansion. He was responsible for preparing findings reports and submitting to the appropriate state and federal agencies for review and concurrence. Additionally, he assisted with Phase I Site Assessments (ESAs) within the right-of-way and Asbestos Inspections of structures impacted by the proposed construction.			
01/14-05/17	H.004987 / US 190/COLLINS BOULEVARD WIDENING (LA 25 TO US 190B): Covington, LA. Wetland Scientist - Mr. McCoy was responsible for conducting a wetland delineation, preparing a wetland report, and performing T&E species analysis for this FHWA LADOTD Environmental Assessment Project.			
11/21-Present	H.01000, SPN 44-14315 / PAINTING INSPECTION AND ENVIRONMENTAL MONITORING WITH CONSTRUCTION ENGINEERING AND INSPECTION STATEWIDE, US 171, CALCASIEU RIVER BRIDGE REPAIRS (HBI): Calcasieu Parish, LA. On-Site Environmental Monitor - Mr. McCoy collects pre-project soil samples; conducts air quality monitoring for TSP-Lead during construction; conducts visual assessments of contractor air emissions; observes contractor sample collection; ensures compliance with specifications during hazardous waste and waste water collection, storage, disposal/discharge; inspects contractor compliance with worker training and safety requirements; documents waste shipments and water discharges; files daily reports; collects post-project soil samples.			
03/21-06/22	NATURAL RESOURCE FLORA AND FAUNA SURVEYS: Naval Station Great Lakes, IL. Lead Field Biologist - Mr. McCoy was the Lead Field Biologist responsible for conducting the necessary field efforts to document federal and state rare, threatened and endangered flora and fauna species found within the designated survey areas provided within the SOW. Mr. McCoy prepared a work plan that identified the flora and fauna species that potentially occurred on the base, and established the survey methods required to search for and document any rare, threatened, and endangered plant, mammal, bird, pollinator, or herpetofauna species occurring within the designated survey areas. Mr. McCoy coordinated four multi-day field efforts with the Natural Resource Manager for the base as well as other personnel on the base required for access to the base.			
10/17-04/19	H.012259, SPN 44-05410 / PAINTING INSPECTION AND ENVIRONMENTAL MONITORING STATEWIDE, DISTRICT 03 BRIDGE REPAIRS / LA 182 AT BAYOU BOEUF: St. Mary and Assumption Parishes, LA. On-Site Environmental Monitor - Mr. McCoy collects pre-project soil samples; conducted air quality monitoring for TSP-Lead during construction; conducted visual assessments of contractor air emissions; observed contractor sample collection; ensured compliance with specifications during hazardous waste and waste water collection, storage, disposal/discharge; inspected contractor compliance with worker training and safety requirements; documents waste shipments and water discharges; files daily reports; collects post-project soil samples.			

FIRM EMPLOYED BY Koury Environmental Services, LLC			
NAME	John Koury, Jr.		YEARS OF RELEVANT EXPERIENCE WITH THIS EMPLOYER 4
TITLE	Principal/Environmental Manager		YEARS OF RELEVANT EXPERIENCE WITH OTHER EMPLOYER(S) 34
DEGREE(S) / YEARS / SPECIALIZATION		M.S. / N/A / Environmental Management	
ACTIVE REGISTRATION NUMBER / STATE / EXPIRATION DATE		CL 77337 / Louisiana / 12-01-2027 C-96578 / Louisiana / 12-31-2027	
YEAR REGISTERED	1996	DISCIPLINE	Hazardous Waste Treatment or Removal; Underground Storage Tanks
CONTRACT ROLE(S) / BRIEF DESCRIPTION OF RESPONSIBILITIES		Role on this Project: Manage all aspects of UST projects, including but not limited to Phase II and Phase II site assessments, UST closures, soil and groundwater assessments, RECAP preparation, CAP preparation and implementation, and regulatory meetings.	
EXPERIENCE DATES (MM/YY–MM/YY)	EXPERIENCE AND QUALIFICATIONS RELEVANT TO THE PROPOSED CONTRACT; I.E., “DESIGNED DRAINAGE”, “DESIGNED GIRDERS”, “DESIGNED INTERSECTION”, ETC. EXPERIENCE DATES SHOULD COVER THE YEARS OF EXPERIENCE SPECIFIED IN THE APPLICABLE MPR(S).		
<i>38 years of experience</i>	<i>35 years of experience in managing Phase I environmental site assessments (ESAs), Phase II ESAs, soil and groundwater assessments, groundwater monitoring, risk-based site assessments, risk-based corrective action plan preparation and implementation, and UST closures.</i>		
10/03 – 01/15	FOOD N FUN # 18: 203 North Lewis Street, New Iberia, LA. Project Manager - Mr. Koury served as the project manager throughout the entire project. Mr. Koury managed all aspects of the site assessment, the corrective action plan development and implementation, the site closure, and all communications and meetings with both the client, the DEQ and all other stakeholders. Hydrocarbon contamination was discovered in the soil and groundwater in a DOTD ROW. Several responsible parties were identified. The complete extent of soil and groundwater impact was delineated. A risk-based assessment and corrective action plan were completed, submitted to the DEQ and approved by DEQ. Corrective action consisting of dual phase extraction, phytoremediation and chemical injection/oxidation/bioremediation was utilized to address all impacted soil and groundwater on numerous properties adjacent to, and including, the DOTD ROW. All work was funded through the Louisiana Motor Fuels Underground Storage Tank Trust Fund.		
01/95 – 06/15	FRIEND’S CONVENIENCE STORE # 851: 999 East Main Street, New Iberia, LA. Project Manager - Mr. Koury served as the project manager throughout the entire project. Mr. Koury managed all aspects of the site assessment, the corrective action plan development and implementation, removal of the USTs, the site closure, and all communications and meetings with both the client, the DEQ and all other stakeholders. Hydrocarbon contamination was discovered in the soil and groundwater on several properties, including a DOTD ROW. The complete extent of the soil and groundwater impact was delineated. A risk-based assessment and corrective action plan were completed, submitted to the DEQ and approved by DEQ. Corrective action consisting of pump and treat, and dual phase extraction was utilized to address all impacted soil and groundwater on numerous properties, including the DOTD ROW. The DOTD ROW was ultimately transferred back to the original property owners following completion of the new roadway and bridge project. All USTs were properly closed prior to the site being closed by the DEQ. All work was funded through the Louisiana Motor Fuels Underground Storage Tank Trust Fund.		
01/95 – 06/11	WEST MAIN SHELL: 1150 West Main Street, New Iberia, LA. Project Manager - Mr. Koury served as the project manager throughout the entire project. Mr. Koury managed all aspects of the site assessment, the corrective action plan development and implementation, the site closure, and all communications and meetings with both the client, the DEQ and all other stakeholders. Hydrocarbon contamination discovered on numerous commercial and residential properties. The complete extent of soil and groundwater contamination, and free-phased product was delineated. Corrective action consisting of pump and treat, and dual phase extraction was utilized to address all impacted soil and groundwater, as well as recovery of more than 2,000 gallons of phase separated hydrocarbons. All work was funded through the Louisiana Motor Fuels Underground Storage Tank Trust Fund.		

FIRM EMPLOYED BY		Petro Plus Construction, Inc.	
NAME	Joseph Bushnell	YEARS OF RELEVANT EXPERIENCE WITH THIS EMPLOYER	10
TITLE	President	YEARS OF RELEVANT EXPERIENCE WITH OTHER EMPLOYER(S)	30

40 years of experience	<i>Mr. Bushnell is the founder and President of Petro Plus Construction, Inc. located off I-12 in Holden, Louisiana. Petro Plus Construction specializes in the convenience store industry; from new construction of the building, installation and service of underground fuel storage tanks, fuel dispensers, tank monitoring systems, and point of sale systems. Mr. Bushnell has worked in this specialized industry for the past 37 years. He started working for Easterly Oil Company in the early 80's and later on for Petro Chem Maintenance in the early 90's. In 1996, Joe decided to start his own business and has evolved through the years to the business he has today. Mr. Bushnell became certified through the Louisiana Department of Environmental Quality in 1997, license #IRC-0495, and holds a general contractors license with the Louisiana State Board of Contractors. Mr. Bushnell also holds many other certifications and licenses related to this industry; and completes continuing education in order to maintain these licenses.</i>		
04/2026	PETRO PLUS CONSTRUCTION, INC., HAMMOND AIRE SHOPPING SPA: Baton Rouge, LA. President/ Certified LDEQ/ LA Board of Contractors/ On the Board for La Department Of AG – Project included installation, removal, and repair of USTS, dispensers and POS registers for commerical builder of coinveinence stores.		
03/2026	IRC SERVICES, INC., ADDIS SERVICE STATION: Addis, LA. President – Certified LDEQ/LA Board of Contractors – Project included installation, removal, and repair of USTS, dispensers and POS registers for commerical builder of conveyence stores.		
11/2025	BUSHNELL PUMP SERVICES, PORT VINCENT VILLAGE: Denham Springs, LA. President – Certified LDEQ/LA Board of Contractors – Project included installation, removal, and repair of USTS, dispensers and POS registers.		

SF 24-102 SECTIONS

17-18

LA 70 MISSISSIPPI RIVER BRIDGE, PHASE II CE&I, PAINTING INSPECTION, AND ENVIRONMENTAL MONITORING

Client: LADOTD

For this approximately \$34M construction project, GEC provided CE&I and Environmental Monitoring Services for the cleaning and painting of all steel surfaces, super- and substructure repairs along the main span, rivet replacement, and handrail and deck spall repairs.

17. Firm Experience

SERVICES COMPLETED BY THIS FIRM (MM/YY)		07/07	COST OF CONSULTANT SERVICES PROVIDED BY THIS FIRM (\$1,000'S)			\$ 169

Describe the project including the firm's role and members involved. (Highlight staff to be used in this proposal.)

From January 2003 to July 2007, the GEC's Environmental Sciences and Engineering Department provided environmental planning, surveying, design, permitting and compliance services pursuant to the construction of 84.2 miles and 3,400 acres of new highway construction comprising 13 projects. GEC conducted wetland delineations for more than 110 acres of wetlands and Other Waters sites and threatened and endangered (T/E) species surveys for three species. GEC conducted all necessary coordination with the U.S. Coast Guard, Eighth District, to obtain authorizations in accordance with the Coast Guard Act of 1982 for the construction of 25 new bridges. GEC also conducted all coordination with the Louisiana Department of Wild life and Fisheries necessary to obtain three Scenic River Use Permits.

The work included storm water planning, design, permitting, inspection, recordkeeping, and reporting, including the development of SWPPPs and BMPs, in accordance with Section 402 of the Clean Water Act, as amended, LDEQ's General Permit for Discharges of Storm Water From Construction Activities of Five Acres or More (Master General Permit LAR100000), and LDEQ's General Permit for Small (greater than one acre but less than five acres) Construction Activities (Master General Permit LAR200000).

To facilitate U.S. Army Corps of Engineers and Louisiana Department of Environmental Quality Clean Water Act Section 401/404 permitting, GEC combined project segments, where feasible, and initiated cost-effective compensatory mitigation processes with LDWF. For this particular corridor GEC reduced the required number of permits from 13 to five and, as a result, obtained the required wetlands and water quality permits within five months of application. GEC also obtained 13 CWA Section 402 General Storm Water Permits from LDEQ for construction of the corridor. All environmental data were collected using global positioning system (GPS) equipment, and field data were stored, managed, merged with highway plan and profile computer aided design and drafting (CADD) files, and analyzed using GIS to facilitate reporting and regulatory coordination.

Using this methodology GEC was able to expedite regulatory review and permitting, and all permits necessary for project construction were obtained at an accelerated rate and well in advance of construction letting. GEC GIS data included, in part, aerial photography, USGS topographic maps, NWI maps, soil surveys, wetlands, Other Waters and T/E field survey data, highway plan and profile designs, NRCS WRP and CRP properties, state and federally owned stewardship areas, LDWF natural heritage data, and scenic streams.

The program required National Environmental Policy Act (NEPA) evaluations and processing necessary to procure Federal and other environmental permits required for construction.

Firm Members Involved: Will Grant, Jason Avant, Barry McCoy

The acceleration of the TIMED Program was extremely successful and the program was completed in 2013. This was seventeen years ahead of the original scheduled completion of 2030.

SERVICES COMPLETED BY THIS FIRM (MM/YY)		2026	COST OF CONSULTANT SERVICES PROVIDED BY THIS FIRM (\$1,000'S)			\$ 14

Describe the project including the firm's role and members involved. (Highlight staff to be used in this proposal.)

GEC provided continued environmental assessment and regulatory support for the closure of a petroleum release impacting soil and groundwater under the Louisiana Department of Environmental Quality (LDEQ) Risk Evaluation/Corrective Action Program (RECAP). Services included review and evaluation of historical investigation data, assessment of contaminant migration pathways, and implementation of RECAP Management Option 1 (MO-1) and Management Option 2 (MO-2) evaluations utilizing current industrial land use standards.

The project involved the evaluation of soil and groundwater analytical data, delineation of residual impacts, preparation of RECAP calculations and exposure assessments, and coordination with LDEQ regarding site-specific risk management and closure requirements. Engineering and institutional controls were evaluated and incorporated into the overall site management strategy to address remaining impacts while maintaining protectiveness of human health and the environment.

GEC prepared technical documentation supporting risk-based closure, including justification for the application of industrial exposure assumptions, identification of applicable exposure pathways, and development of land use restrictions necessary to support site closure. A conveyance notice was prepared and implemented for the area of concern to document applicable environmental conditions and land use limitations associated with residual contamination remaining in place.

Through coordination with LDEQ and application of RECAP risk management principles, the site successfully achieved a No Further Action (NFA) determination, allowing closure of the release in accordance with applicable state regulatory requirements.

SERVICES COMMENCED BY THIS FIRM (MM/YY)		2025	TOTAL CONSULTANT CONTRACT COST (\$1,000'S)			\$ 22
SERVICES COMPLETED BY THIS FIRM (MM/YY)		12/25	COST OF CONSULTANT SERVICES PROVIDED BY THIS FIRM (\$1,000'S)			\$ 19

Describe the project including the firm's role and members involved. (Highlight staff to be used in this proposal.)

GEC was engaged to provide environmental response and regulatory support following a brine pipeline release in Iberville Parish. Services began with an initial site reconnaissance to assess site conditions, identify potentially impacted areas, and develop an appropriate investigation strategy based on observed release conditions, site accessibility, and surrounding land use.

Following the initial assessment, GEC developed a site-specific Soil Sampling Work Plan in accordance with applicable Louisiana Department of Environmental Quality (LDEQ) requirements. The work plan outlined proposed sampling methodologies, sampling locations, analytical parameters, QA/QC procedures, and health and safety considerations for investigation activities. The work plan was subsequently submitted to and approved by LDEQ prior to implementation of field activities.

Environmental investigation activities included the development of a soil sampling work plan and health and safety plan, collection of soil samples utilizing both hand auger and direct push drilling methods to evaluate the lateral and vertical extent of impacts associated with the release. Sampling locations were strategically selected based on field observations, site conditions, suspected migration pathways, and areas of potential concern identified during the initial investigation. All field activities, sample handling procedures, and chain-of-custody protocols were conducted in accordance with applicable regulatory guidance and industry standards.

Following receipt of laboratory analytical results, GEC evaluated the nature and extent of impacts and prepared a comprehensive Soil Sampling Report documenting investigation procedures, analytical findings, site conditions, data interpretation, and recommendations for corrective action. The report included delineation of impacted areas, evaluation of potential environmental concerns, and recommendations for remediation activities necessary to address affected soils.

Following excavation and removal of impacted materials, GEC conducted confirmatory soil sampling to verify that remaining soil conditions satisfied applicable LDEQ regulatory criteria and project closure requirements. Confirmatory sampling results demonstrated that remediation objectives had been achieved and that remaining site conditions met applicable standards for closure.

Through coordination with LDEQ and implementation of responsive investigation and remediation activities, GEC successfully supported regulatory closure of the release and achieved site closure in accordance with applicable state environmental requirements.

SERVICES COMMENCED BY THIS FIRM (MM/YY)	05/24	TOTAL CONSULTANT CONTRACT COST (\$1,000'S)			\$ 1,993
SERVICES COMPLETED BY THIS FIRM (MM/YY)	Ongoing	COST OF CONSULTANT SERVICES PROVIDED BY THIS FIRM (\$1,000'S)			\$ 1,993

Describe the project including the firm's role and members involved. (Highlight staff to be used in this proposal.)

GEC provided engineering and environmental support services for remedial activities associated with the Former Agriculture Street Landfill Site in New Orleans, Louisiana. The project involved environmental remediation and site restoration activities across 80+ residential properties and surrounding impacted greenspaces affected by historical landfill-related contamination. GEC's role included environmental planning, regulatory coordination, remedial oversight, construction coordination, health and safety implementation, waste characterization, confirmatory sampling, data analysis, and preparation of comprehensive regulatory documentation in support of removal actions and long-term site management activities.

The project required coordination of environmental remediation activities at nine un-remediated residential properties and adjacent impacted areas, including sampling and data analysis in accordance with RECAP, excavation and removal of contaminated soils, installation of geotextile separation materials, placement of clean backfill, demolition coordination including air monitoring, asbestos abatement, erosion control implementation, and revegetation activities. Remedial activities were performed under active environmental and construction conditions while maintaining compliance with applicable regulatory and health and safety requirements.

GEC supported the environmental management of contaminated media through coordination of soil characterization, analytical testing, transportation, and disposal activities. Soil samples were collected and analyzed for contaminants of concern, including metals and Toxicity Characteristic Leaching Procedure (TCLP) parameters, to support waste profiling, remediation decision-making, and regulatory compliance. Laboratory analytical data were reviewed and evaluated to support delineation of impacted materials, confirmation of remedial effectiveness, and documentation of compliance with applicable environmental standards.

Following remediation activities, GEC coordinated revegetation and restoration efforts, including installation of Bermuda sod and development of maintenance protocols to promote long-term site stability and erosion prevention.

The remedial actions were conducted in accordance with a Remedial Action Plan and a Soil Management Plan that were prepared by GEC and approved by the City of New Orleans in coordination with LDEQ and EPA Region 6. As part of the remedial actions, GEC also prepared a Tree Maintenance Plan and a Best Management Practices Plan that were approved by the City of New Orleans, EPA Region 6, and the Louisiana Department of Agriculture and Forestry.

In addition to remedial implementation, GEC developed and implemented environmental health and safety procedures to address potential exposure risks associated with lead- and arsenic-impacted soils during excavation and construction activities. Site activities were performed in accordance with OSHA HAZWOPER requirements and project-specific health and safety procedures, including implementation of modified Level D personal protective equipment, dust control considerations, and hazardous material handling procedures.

Firm Members Involved: Bijan Sharafkhani, PE, Michael Simms, PhD, PG, Emily Welch, PG, Ashlyn Harmon, PhD

The project involves environmental remediation and site restoration activities across 80+ residential properties and surrounding impacted greenspaces affected by historical landfill-related contamination.

** If there is more than one discipline included in the proposal, then indicate which discipline(s) this project is being used to represent. **This field cannot be left blank and N/A is not acceptable. The only disciplines to be used are: Appraiser, Bridge, CE&I/OV, CPM, Data Collection, Environmental, Geotech, ITS, Other (must specify), Planning, Right-of-Way, Road, Survey, and Traffic.*

GEC and GPI worked together on LADOTD Contract No. 4400006762 – Retainer Contract for Painting Inspection and Environmental Monitoring With Construction Engineering and Inspection Statewide.

As sub, GEC provided all environmental monitoring services in accordance with LADOTD Specification 811 for the cleaning and painting of bridges at six locations in Monroe and along the I-20 corridor west of Monroe. The services included pre-project, baseline soil and air quality sampling; Resource Conservation and Recovery Act (RCRA) identification application to the Louisiana Department of Environmental Quality (LDEQ); quality assurance reviews of contractor's worker protection, environmental protection, and waste management plans; air quality monitoring for total suspended particulates (TSP-Lead) during abrasive blasting; compliance observation and documentation with hazardous waste and waste water collection, storage, disposal/discharge, and reporting requirements; the preparation of recurring LADOTD reports, including Annual Hazardous Waste Reports (AHWR) to LDEQ; post-project soil sampling; and, when required, assistance during post-project audits by LDEQ.

Firm Members Involved: Jason Avant, Barry McCoy

Hydrocarbon contamination was discovered in the soil and groundwater in a DOTD ROW. Several responsible parties were identified. The complete extent of the hydrocarbon impact was delineated in the soil and groundwater. A risk-based assessment and corrective action plan were completed, submitted to the DEQ and approved by DEQ. Corrective action consisting of dual phase extraction, phytoremediation and chemical injection/oxidation/bioremediation was utilized to address all impacted soil and groundwater on numerous properties adjacent to, and including, the DOTD ROW. All work was funded through the Louisiana Motor Fuels Underground Storage Tank Trust Fund.

Firm Members Involved: John Koury, Jr.

G.E.C., INC.

18. Approach and Methodology

IDIQ Contracts for Environmental Impact Assessment and Remediation, Statewide

Experience & Capacity

G.E.C., Inc. (GEC) will serve as a partner to LADOTD by providing a multidisciplinary team with experience in concurrent Phase I Environmental Site Assessments (ESAs), Limited Site Investigations (LSIs), Phase II investigations, Corrective Action Plan (CAP) development, remediation implementation, post-remediation monitoring, and regulatory reporting activities for LADOTD projects statewide. Our staff is familiar with LADOTD standards, processes, review expectations, and district coordination requirements associated with project delivery.

Our leadership team, Chuck Carr Brown, PhD and Bijan Sharafkhani, PE, offers in-depth experience with LDEQ and LADOTD, representing more than 89 years of combined expertise. This includes direct work within LDEQ and LADOTD projects administered by both Headquarters and District offices statewide.

Bijan will serve as project manager. He is a licensed professional engineer in Louisiana with 43 years of experience in civil and environmental engineering fields. Prior to GEC, he served with the Louisiana Department of Environmental Quality (LDEQ) for more than 33 years as an engineer in the Waste Division, engineering supervisor, engineering manager, Division Administrator, and finally Confidential Advisor to the Secretary. In these various positions, he has established himself as a recognized authority in solid & hazardous waste, superfund, remediation of contaminated sites, permitting, design, construction, assessment, and management. He has successfully overseen numerous projects that demonstrate his ability to navigate complex regulatory frameworks, develop innovative solutions, identify potential risks, implement effective safety measures, and address various environmental challenges. **Bijan was also one of the founders of the Louisiana RECAP program for risk-based evaluation and corrective action.**

This team was built to support simultaneous Task Orders and provide LADOTD with the flexibility and bench strength required for this IDIQ contract. Koury and Petro Plus Construction strengthen environmental assessment and remediation service capacity. Together, the team can work independently or collaboratively to deliver multiple Task Orders concurrently. This structure functions as parallel design capacity within a single IDIQ contract.

Project Understanding & DOTD Support

GEC understands that the objective of this contract is to provide responsive, technically sound, efficient, and regulatory-compliant environmental assessment and remediation services for potentially contaminated sites throughout the State of Louisiana under multiple concurrent Task Orders (TOs). GEC's approach is structured to provide efficient coordination with the Louisiana Department of Transportation and Development (DOTD),

the Louisiana Department of Environmental Quality (LDEQ), and other agencies or organizations while maintaining flexibility to address varying site conditions, schedules, regulatory requirements, and expediency.

We understand that each Task Order carries different expectations for scope definition, delivery timeframe, and coordination effort. We have experience delivering projects under these varying conditions and structured our team to mobilize quickly and adjust resources as required to support concurrent assignments.

This IDIQ is understood to be a capacity relief and delivery support tool for LADOTD. GEC's role is to supplement internal resources, expedite project advancement where needed, and maintain consistency with LADOTD standards, procedures, and expectations.

Approach

GEC's approach to this IDIQ emphasizes early coordination, disciplined scoping, and efficient execution. GEC's project management structure is specifically designed to support multiple simultaneous TOs, including **concurrent Phase I Environmental Site Assessments (ESAs), Limited Site Investigations (LSIs), Phase II investigations, Corrective Action Plan (CAP) development, remediation implementation, post-remediation monitoring, and regulatory reporting activities statewide.**

GEC will assign a dedicated Project Manager who will serve as the primary point of contact for DOTD and will oversee all technical, scheduling, budgetary, and coordination activities associated with the contract. Supporting technical leads and field personnel will be assigned based on the complexity and requirements of each individual TO.

GEC's project management approach includes:

- Early coordination with DOTD and LDEQ
- Timely development and submittal of work plans
- Continuous schedule management and milestone tracking
- Continuous communication regarding site conditions, findings, and regulatory issues
- Coordination of subcontractors, laboratories, drillers, and disposal contractors
- Internal QA/QC review procedures for all deliverables
- Timely response to DOTD requests and accelerated project schedules

GEC recognizes that environmental projects frequently involve compressed schedules, active rights-of-way, utility conflicts, and operational constraints. Accordingly, GEC will maintain staffing depth and field resources capable of supporting up to twelve (12) concurrent TOs while maintaining schedule and quality expectations.

Methodology

GEC's methodology emphasizes communication, timely mobilization, regulatory coordination, technically sound decisions, and practical remediation solutions tailored to transportation-related projects and Areas of Concern (AOCs). All work will be governed by the project QA/QC plan and performed in accordance with applicable federal, state,

and local regulations, current LDEQ Risk Evaluation/Corrective Action Program (RECAP) requirements, applicable UST Closure Guidance Documents, and DOTD standards and procedures.

PHASE I ENVIRONMENTAL SITE ASSESSMENTS

GEC will review prior relevant Phase I ESAs, perform Phase I ESAs and initial AOC evaluations through the review of available environmental, historical, and regulatory information and through site reconnaissance activities in accordance with ASTM E1527-21 – Standard Practice for Environmental Site Assessments. Typical Phase I ESA activities include **review of prior environmental reports; review of LDEQ RECAP and regulatory files; historical aerial and map review; review of site operational history; site inspections and visual observations as needed or required by the DOTD and the DEQ; identification of recognized environmental conditions (RECs); identification of AOCs; evaluation of potential environmental impacts; and recommendations regarding additional investigation, if warranted.**

GEC will evaluate environmental conditions potentially impacting DOTD projects, including but not limited to **petroleum hydrocarbons, chlorinated solvents, hazardous materials, historical USTs, contaminated fill materials, groundwater impacts, and abandoned industrial or commercial operations.** All findings will be documented in concise, technically defensible reports containing clear conclusions and recommendations.

LIMITED SITE INVESTIGATIONS AND PRELIMINARY PHASE II ASSESSMENTS

Where additional investigation is required, GEC will conduct LSIs and Preliminary Phase II investigations in accordance with current LDEQ RECAP requirements and applicable regulatory guidance. Prior to field activities, GEC will prepare **site-specific work plans containing scope of services; proposed investigation activities; site diagrams; boring and sampling locations; analytical parameters; utility clearance procedures; schedules; itemized cost estimates; and health and safety considerations.**

Field investigation activities may include **soil borings; monitoring well installation; groundwater sampling; soil and groundwater laboratory analysis; geologic and hydrogeologic evaluation; soil vapor assessment; excavation oversight; and environmental sampling and field screening.**

All sampling and testing procedures will be conducted in accordance with applicable LDEQ guidance documents, RECAP standards, industry standards, and approved work plans. GEC will coordinate utility clearances and implement appropriate traffic control and site safety procedures prior to field mobilization.

Analytical data will be evaluated utilizing current RECAP screening standards and risk evaluation methodologies. GEC will develop conceptual site models and evaluate the nature and extent of environmental impacts, potential exposure pathways, and potential risks to human health and the environment.

CORRECTIVE ACTION PLAN DEVELOPMENT

For sites requiring remediation, GEC will prepare site-specific CAPs in accordance with applicable LDEQ regulations/guidance and DOTD project objectives. CAP development

activities may include **evaluation of site characterization data; conceptual site model development; contaminant migration assessment; remediation feasibility evaluation; comparative analysis of remedial alternatives; development of implementation schedules; preparation of remediation cost estimates, and post-closure monitoring.**

A primary objective of the corrective action process will be to develop and implement remedies capable of achieving applicable RECAP Standards in a technically sound, cost-effective, and defensible manner. Achieving RECAP closure criteria is critical to reducing potential risk to human health and the environment, supporting regulatory compliance, and minimizing long-term liability and future site management obligations for DOTD. GEC will therefore emphasize early identification of data gaps, evaluation of exposure pathways, and selection of remedial strategies that are aligned with site-specific RECAP requirements and anticipated regulatory expectations.

GEC will evaluate multiple remedial alternatives, where feasible, based on anticipated effectiveness; constructability; transportation corridor constraints; implementation schedule; compliance with applicable regulations; long-term monitoring requirements; and estimated costs.

Potential remedial technologies may include **excavation and disposal; groundwater recovery and treatment (and all applicable permits such as water discharge permit); in-situ treatment; monitored natural attenuation; engineering controls; institutional controls; and other proven remedial technologies appropriate for site conditions.**

CAPs will include plan and profile drawings identifying impacted soil and groundwater areas; excavation limits; monitoring well locations; recovery system locations; clean overburden extents; and proposed remediation areas. GEC will provide DOTD with a recommended remedial alternative supported by technical justification, implementation considerations, anticipated effectiveness, and cost evaluation.

CORRECTIVE ACTION IMPLEMENTATION AND SITE ACTIVITIES

Upon approval of a CAP by DOTD and LDEQ, GEC will implement the selected remedial approach in accordance with approved work plans and regulatory requirements. Implementation activities may include **mobilization and field coordination; contaminated soil excavation; groundwater management; waste characterization and disposal coordination; dewatering activities; monitoring well installation and abandonment; confirmation sampling; site restoration; and post-remediation monitoring.**

GEC recognizes the importance of minimizing disruption to DOTD operations, roadway activities, utilities, adjacent properties, and the traveling public. All work activities will be coordinated to minimize operational impacts and maintain safe working conditions. GEC will provide appropriate notifications to regulatory agencies, utility owners, and DOTD personnel prior to field activities and will maintain active communication throughout implementation activities.

REGULATORY COORDINATION, REPORTING, AND QA/QC

GEC will prepare all required reports and deliverables in accordance with applicable LDEQ, RECAP, and DOTD requirements. Deliverables may include **Phase I ESA reports; LSI**

All deliverables will undergo internal QA/QC review prior to submittal. QA/QC procedures will include senior technical review; regulatory compliance review; laboratory data verification; chain-of-custody review; consistency review between text, tables, and figures; and verification of compliance with DOTD and LDEQ requirements. GEC will maintain active coordination with DOTD and LDEQ throughout each TO to facilitate timely review, comment resolution, and project completion.

All work will be performed in accordance with applicable OSHA requirements, HAZWOPER requirements, DOTD safety requirements, and project-specific Health and Safety Plans (HASPs). Safety procedures may include utility clearance verification; traffic control implementation; hazardous material handling procedures; air monitoring, where appropriate; personal protective equipment requirements; heat stress monitoring; and emergency response procedures. GEC's personnel and subcontractors will maintain all required certifications, licenses, and safety training necessary to perform work under this contract.

GEC understands the importance of timely environmental services in support of transportation project delivery. GEC is committed to providing DOTD with responsive project management, technically sound environmental services, practical remediation solutions, and efficient coordination with regulatory agencies to support successful completion of TOs throughout the State of Louisiana.

GEC recognizes that many DOTD projects involve accelerated schedules and critical path constraints associated with roadway construction, utility relocation, and right-of-way acquisition. To support timely project delivery, GEC will implement the following schedule management procedures:

- GEC's project management structure is specifically organized to support concurrent environmental investigations and remediation activities while maintaining responsiveness, technical quality, and regulatory compliance. Figure 1 below includes a sample project schedule.

Figure 1. Project Schedule

Tasks	Estimated Duration
Notice to Proceed/TO Kickoff Meeting	1-3 Days
Phase I ESA Records Review and Site Reconnaissance	1-2 Weeks
Phase I ESA Report Preparation and Submittal	1 Week
Development of LSI/Phase II Work Plan	1-2 Weeks
DOTD/LDEQ Work Plan Review and Revisions	1-3 Weeks
Utility Clearance Coordination and Filed Scheduling	1-2 Weeks
Field Investigation Activities (Borings, Sampling, Monitoring Wells)	1-3 Days
Standard Laboratory Analytical Turnaround	10-14 Days
LSI/Phase II Report Preparation	2-3 Weeks
RECAP Evaluation/Risk Assessment	1-2 Weeks
CAP Development and Cost Evaluation	2-4 Weeks
DOTD/LDEQ CAP Review and Approval	2-6 Weeks
Remediation Work Plan Development	1-2 Weeks
Remediation Mobilization and Procurement	1-3 Weeks
Remediation Activities	2 Days - 2 Weeks
Groundwater Assessment/Monitoring Activities	Ongoing as Required
Confirmation Sampling and Data Evaluation	1-2 Weeks
Closure Reporting	2-4 Weeks
LDEQ Closure Review/NFA Determination	Agency Dependent

SF 24-102 SECTIONS

19-23

TIMED PROGRAM – JOHN JAMES AUDUBON BRIDGE (ST. FRANCISVILLE, LA)

Client: LADOTD

From January 2003 to July 2007, the GEC's Environmental Sciences and Engineering Department provided environmental planning, surveying, design, permitting and compliance services pursuant to the construction of 84.2 miles and 3,400 acres of new highway construction comprising 13 projects.
