# **DOTD FORM: 24-102**

## PROPOSAL TO PROVIDE CONSULTANT SERVICES

(Revised December 12, 2024)

Prime consultant shall complete the DOTD Form 24-102 without altering the Form's text; however, the instruction and/or guidance for Sections 12 through 23 can be removed but do not remove Section title and number.

ANY CONSULTANT FAILING TO SUBMIT ANY OF THE INFORMATION REQUIRED ON THE DOTD FORM 24-102, OR PROVIDING INACCURATE INFORMATION ON THE DOTD FORM 24-102, MAY BE CONSIDERED NON-RESPONSIVE.

1.	Contract Name as shown in the advertisement	LOWER CC RD OVER HORTON BAYOU
		EAST FELICIANA PARISH
2.	Contract Number(s) as shown in the advertisement	4400030638
3.	State Project Number(s), if shown in the advertisement	H.016030.5
4.	Prime consultant name	TriCoeur Services, L.L.C.
	(Exactly as registered with the Louisiana Secretary of State (SOS) where such registration is required by law; including punctuation.  Screenshot from SOS at the end of Section 20)	TriCoeur Services LLC
		(Louisiana charter number 40282112K)
5.	Prime consultant license number	EF#: 4660
	(as registered with the Louisiana Professional Engineering and Land	VF#: 0653
	Surveying Board (LAPELS) if registration is required under Louisiana law)	
6.	Prime consultant mailing address	9270 Siegen Lane, Bldg. 501, Baton Rouge, LA 70810
7.	Prime consultant physical address	9270 Siegen Lane, Bldg. 501, Baton Rouge, LA 70810
	(existing, if location is used as an evaluation criteria)	
8.	Name, title, phone number, and email address of prime consultant's contract	Barry P. Gahagan, PE, PLS; Projects Principal
	point of contact	Phone: 225-266-7507
		E-Mail: BGahagan@TriCoeur.com
9.	Name, title, phone number, and email address of the official with signing	Aileen Foley, Managing Principal
	authority for this proposal	Phone:225-228-2681
		Email: AFoley@TriCoeur.com

10. This is to certify that all information contained herein is accurate and true, and that the team presently has sufficient staff to perform these services within the designated time frame. By submitting this proposal, proposer certifies that it is not engaged in a boycott of Israel and it will, for the duration of its contract obligations, refrain from a boycott of Israel. Proposer also certifies and agrees that the following information is correct: In preparing its response, the proposer has considered all proposals submitted from qualified, potential subcontractors and suppliers, and has not, in the solicitation, selection, or commercial treatment of any subcontractor or supplier, refused to transact or terminated business activities, or taken other actions intended to limit commercial relations, with a person or entity that is engaging in commercial transactions in Israel or Israeli-controlled territories, with the specific intent to accomplish a boycott or divestment of Israel. The proposer also has not retaliated against any person or other entity for reporting such refusal, termination, or commercially limiting actions. DOTD reserves the right to reject the response of the bidder or proposer if this certification is subsequently determined to be false, and to terminate any contract awarded based on such a false response.

Signature above shall be the same person listed in Section 9:

Date: February 6, 2025

Pursuant to Act No. 581 of the 2024 Louisiana Legislature Regular Session, proposer further certifies that it does not have a practice, policy, guidance, or directive that discriminates against a firearm entity or firearm trade association based solely on the entity's or association's status as a firearm entity or firearm trade association. In addition, proposer certifies it will not discriminate against a firearm entity or firearm trade association during the term of the contract based solely on the entity's or association's status as a firearm entity or firearm trade association.

11. If a Disadvantaged Business Enterprise (DBE) goal has been set for this advertisement, indicate which firm(s) will be used to meet the DBE goal and each firm(s)' percentage.

Firm(s):

Firm(s):

Firm(s):
Firm(s)' %:
Not applicable

## 12. Discipline Table:

As indicated in the advertisement, insert a completed table here. The percentages for the prime and sub-consultants must total 100% for each discipline, as well as the overall total percent of the contract.

The **only** disciplines to be used are listed in the drop down in each row (Appraiser, Bridge, CE&I/OV, CPM, Data Collection, Environmental, Geotech, ITS, Other (must specify), Planning, Right-of-Way, Road, Survey, and Traffic). **Remove rows as needed.** 

Disciplines	% of Overall	Prime	Firm B	Firm C		Each Discipline
	Contract	TriCoeur Services, LLC	T. Baker Smith, LLC	Terracon Consultants, Inc.		must total to 100%
Bridge	63.3%	100%				100%
Survey	28.1%	10%	90%			100%
Environmental	8.6%	4%		96%		100%
Identify the percentage	ge of work for the	overall contract to be perform	ed by the prime consultant	and each sub-consultant.	•	
Percent of Contract	100%	66.4%	25.3%	8.3%		

## 13. Firm Size:

For all firms that are part of this team, indicate the approximate number of personnel to be committed to this contract, by DOTD Job Classification and the total number of personnel within the firm that could provide support, if needed. If a specialized job classification is required and not included on the DOTD job classification list, specify "Other (must specify)" and include the classification title inside the parentheses.

The DOTD Job Classification(s) to be used can be found at the following link:

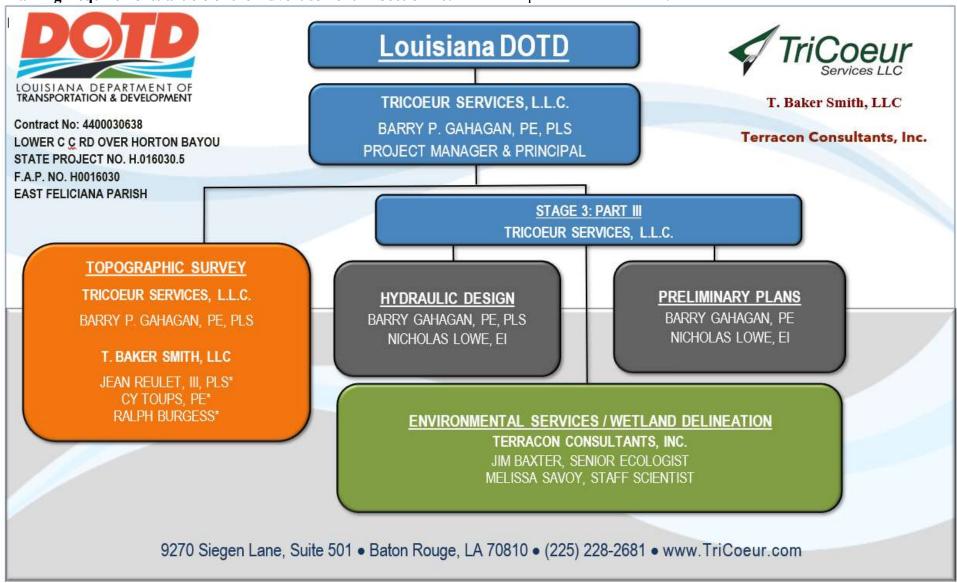

http://wwwsp.dotd.la.gov/Inside LaDOTD/Divisions/Engineering/CCS/Job Qualification/Job%20Classifications%20with%20Descriptions.pdf

Firm name	DOTD Job Classification	Number of personnel committed to this contract	Total number of personnel available in this DOTD Job Classification (if needed)
	Engineer	1	5
	Engineer – Intern	1	1
TriCoeur Services, L.L.C.	CADD Drafter	1	1
	Party Chief	0	1
	Senior Technician	2	4
	Surveyor	1	6
T. Baker Smith, LLC	Party Chief	1	3
	Environmental Manager	1	2
	Biologist/Wetlands	1	2
<b>T</b> 0 1	Biologist/Wetlands	1	3
Terracon Consultants, Inc.	Environmental Manager	1	4

## 14. Organizational Chart:

Provide an organizational chart showing ALL relevant prime consultant and sub-consultant (if applicable) personnel assigned to the contract, area of project responsibility for each, and reporting lines for the purposes of this contract. An individual's role does not necessarily have to match their DOTD job classification identified in Section 13. If applicable, identify all personnel performing traffic engineering analysis and/or QC of traffic engineering analysis by placing an asterisk next to their name. Include the certificates required by the Traffic Engineering Process and Report Training Requirements article of the Advertisement in Section 20. It is acceptable to use an 11x17 format for Section 14.

## 15. Minimum Personnel Requirements:

Use the table below to identify both prime consultant and sub-consultant staff designated to work on this contract meeting the Minimum Personnel Requirements (MPRs) specified in the advertisement. Ensure the résumé reflects the required experience stated in the MPR. Make sure the P.E. discipline is also listed (highlighted in table) that is meeting the MPR; e.g. professional civil engineer should show the discipline of the license as civil if meeting that MPR.

MPR No. Do not insert wording from ad	Personnel being used to meet the MPR (Individual(s) may not satisfy more than one MPR unless specifically allowed by Attachment B of the advertisement)	Firm employed by	Type of license / certification & number	State of license	License / certification expiration date
1	Barry P. Gahagan, PE	A Tri Coour	PE /Civil 21586	LA	3/31/2026
2	Barry P. Gahagan, PE	TriCoeur Services LLC	PE /Civil 21586	LA	3/31/2026
3	Barry P. Gahagan, PE		PE /Civil 21586	LA	3/31/2026
4	Jean Reulet, III, PLS	T. Baker Smith, LLC	PLS.5145	LA	3/31/2026
5	Jim Baxter	Terracon Consultants, Inc.		N/A	N/A

Résumés shall be provided for all prime and sub-consultant personnel listed in Sections 14 and/or 15 of the proposal. Résumés of personnel not identified in Section 14 or Section 15 of the proposal should not be included and will not be evaluated. Résumés are **limited to 2 pages per person**. Any certificates required by the advertisement are to be placed in Section 20.

04/21 - 06/21*	H.014322, Centurion over Drainage Bayou, Topographic Survey; LADOTD; Baton Rouge, LA – Survey Manager. Managed field crews, performed title research, data processing, QAQC and prepared topographic survey deliverables for the design and construction of a bridge in Baton Rouge, LA.
04/21 - 06/21*	H.014255, Beeson Road Over Flagon Bayou Tributary, Topographic Survey; LADOTD; Ball, LA - Survey Manager. Managed field crews, performed title research, data processing, QAQC and prepared topographic survey deliverables for the design and construction of a bridge in Ball, LA.
12/21 - 02/22	Lock No. 3 Road Bridge, Topographic Survey; St. Tammany Parish; St. Tammany Parish, LA – Project Manager. Managed field crews, performed title research, data processing, QAQC and prepared topographic survey deliverables according to LADOTD Off System Bridge guidelines for the design and construction of a bridge in Sun, LA.
01/23 - 06/23	Country Estates Dr. Over St. Louis Bayou; Terrebonne Parish Consolidated Government; Terrebonne Parish, LA - Project Manager. Performed Title Research and Prepared Right of Way maps for the Replacement of a bridge on Country Estates Drive in Terrebonne Parish, LA.
09/22 - 08/23	S.P. No. H.014414, LA 22: Bedico Creek-Pine Creek; LADOTD; St. Tammany Parish, LA — Sr. Project Manager. Performed field crew coordination, data processing, project QA/QC and management for Topographic Survey and Existing Drainage Map. Project involves the widening of LA 22 and improvements to the intersection of LA 22 and Perrilloux Road.
08/22 - 08/24	MA-20-01: Move Ascension, Bluff Road, LA 73 Connector, Ascension Parish Government, Ascension Parish, LA — Project Manager. Provided Topographic surveying and Right-of-Way mapping for the Bluff Road – La 73 Connector Project as part of the Move Ascension Program. The survey was approximately 7,000 feet long and as wide as 300 feet for the design of a roadway to connect LA 73 and Bluff Road.
11/23 - 06/24 (survey complete)	S.P. No. H.015576, LA 447 & LA 1025: Roundabout; LADOTD; Livingston Parish, LA — Sr. Project Manager. Responsible for field crew oversight, data processing and review, and deliverables preparation. Performed Topographic survey for the design and construction of a roundabout at the intersection LA 447 and LA 1025 near Walker, Louisiana.
07/21 - 01/22	S.P. No. H.013116, LA 20 Widening: LA 307 to S. Vacherie, LADOTD, St. James & Lafourche Parishes, LA — Project Surveyor. Performed quality control for the Final R/W Maps for the asymmetrical widening of a 2.7 mile stretch of LA 20 near Vacherie, LA.
09/22 - 06/23	S.P. No. H.015405, Keller Street Bridge Replacement; St. Tammany Parish Government; St. Tammany Parish, LA — Sr. Project Manager. Performed field crew coordination, data processing, project QA/QC and management for Topographic Survey for this bridge replacement project.
01/18 - 04/20*	I-10: LA 415 to Essen Lane - East and West Baton Rouge Parishes — Sr. Project Manager. Responsible for field crew oversight, data processing and review, and deliverables preparation. Performed Topographic survey for the widening of I-10 through Baton Rouge.
11/19 - 12/20*	S.P. No. H.001344.5, US 190: LA 437-US 190 BUS (Ph 1); LADOTD; St. Tammany Parish, LA — Sr. Project Manager. Performed data processing, title research and project QAQC for Property Surveys and Right of way Maps.
10/17 - 01/19*	S.P. No. H.009481.5, LA 20 Bayou Chevreuil Bridge; LADOTD; St. James and Lafourche Parishes, LA — Sr. Project Manager. Performed data processing, title research and project QAQC for Property Surveys and Right of way Maps.

07/24	- Ongoing	IIJA Off-System Bridge Replacement Program; LADOTD; District 08 — Project Manager. Ralph is project manager for H.015339, H.015442, H.015445 & H.015447 which included coordinating with crew, coordinating with DOTD Real estate regarding title work, review of title work, calculations of properties, overseeing property maps and right of way mapping, and coordination with engineering for final taking lines for final right of way maps, and final responsible charge of the final right of way maps. In addition to those, Ralph was QA/QC for all mapping for H.015443, H.015444, H.015446, & H.015448, & H.015449. (Location: LADOTD District 08)							
08/21	S.P. No. H.011833.5, St. Mary Street Sidewalks; LADOTD; Scott, LA — Survey Manager. Ralph managed and directed a topographic survey completed along this route. The survey utilized 3D Terrestrial Scanning of all hard surfaces and traditional methods for all other features. SUE personnel worked to coordinate the collection for all the utility information and location such that survey crews could collect data and incorporate for the submittal up to QLD Level B however an official SUE submittal was not required of this project. Final submittal will be in accordance with latest LADOTD Location and Survey standards.								
09/21	1 - 03/22*	S.P. No. H.014747, Southern University Ravine Protection; LADOTD; East Baton Rouge Parish, LA — Survey Manager. As a							

02/19-4/20*	Project No. PW1178-DR 4277 LA (FEMA); John Thomas Lane Bridge; East Feliciana Parish Government; East Feliciana Parish, LA — Survey Manager. Ralph was responsible for the control, topography and apparent right of way for the bridge.
02/19-3/20*	Project No. PW1190-DR 4277 LA (FEMA); Carruth Road Bridge; East Feliciana Parish Government; East Feliciana Parish, LA — Survey Manager. Ralph was responsible for the control, topography and apparent right of way for the bridge.
03/22 - 09/22*	SP No. H.010960.5-2 Roundabouts at LA 182; LADOTD; Lafayette, LA — Survey Manager. Ralph managed and directed the topographic survey along this route. The survey utilized 3D Terrestrial Scanning of all hard surfaces and traditional methods for all other features. Firm SUE personnel worked to coordinate the collection for all the utility information and location such that survey crews could collect data and incorporate for the submittal up to QLD Level B however an official SUE submittal was not required of this project. Final submittal was in accordance with latest LADOTD Location and Survey standards.
07/20 - 04/21*	SP No. H.001352.5 and H.002273.5 Comite River Diversion Bridge at LA 67, LA 19 and LA 19 Railroad Bridge; LADOTD; East Baton Rouge Parish, LA — Survey Manager. As a subconsultant firm, Ralph was responsible for topographic surveying the LA 67 and LA 19 sites of the Comite River Diversion project. This included merging data from a previous survey on one portion of the site and field verifications of that data. The topographic data for this project was collected traditionally.
01/18 - 01/20*	SP No. H.004100 I-10: LA 415 to Essen Lane on I-10 and I-12, West and East Baton Rouge, LA — Survey Manager. As a subconsultant firm, Ralph was responsible for topographic surveying the portion of I-10 in West Baton Rouge Parish beginning at the start of the project limits to a point just before the approach of the I-10 Bridge and the limits of the project along LA 415 including work on Tributaries of the Intercoastal Canal. This work included using 3D Scanning for the bridge at I-10 bridge at LA 415 as well as scanning every 500' for control verification and incorporation of the Mobile Lidar for the I-10 pavement.
07/17 - 12/18*	SP No. H.010960.5-2, LA 30 Roundabout at Tanger I-10, Ascension Parish, LA — Survey Manager. Ralph's duties included meeting with LADOTD and Cardno, Inc. for utility locations, coordination of crews and 3D terrestrial scanning crew along with office personnel, coordination. Special duties were merging of two state projects with project survey for final submittal to combine all projects together.

Résumés shall be provided for all prime and sub-consultant personnel listed in Sections 14 and/or 15 of the proposal. Résumés of personnel not identified in Section 14 or Section 15 of the proposal should not be included and will not be evaluated. Résumés are **limited to 2 pages per person**. Any certificates required by the advertisement are to be placed in Section 20.

The IIJA Off-System Bridge Replacement Program was created with the signing of the Infrastructure Investment and Jobs Act (IIJA) to increase federal funding to replace rural bridges that are in fair or poor condition. DOTD awarded TBS with the IIJA off system bridge contract for District 08, which allocated approximately \$29 million to cover engineering services, construction, environmental, right-of-way acquisitions, utility relocations and construction support services. In conjunction with the Parishes and LADOTD, 12 bridges were selected for replacement for District 08. These bridges are spread throughout 7 Parishes and 9 State Project Numbers. The replacement structures include Reinforced Concrete Slab Spans and Reinforced Concrete Box Culverts, spanning lengths from 20′-160′. Although most sites were able to be closed to local traffic, low profile runarounds and diversions were necessary on some sites to maintain access and add to the complexity and diversity of this project.

TBS established a project control network, researched existing subsurface utilities, and collected topographic data to aid in hydraulic analysis and design of replacements bridges at each site. The topographic surveys extended along the road for 500' feet from each end of bridge and along the creek for 150 feet upstream and downstream of said bridges. Site photographs were collected to further document existing conditions. All project deliverables were prepared to LADOTD Location & Survey Standards. Where the design engineer identified a need for additional right-of-way, TBS provided Property Surveys and Right-of-Way maps for use in acquisition. Survey crews located boundary monumentation and other evidence of possession to determine the extents of the existing highway rights-of-way and landowners affected by right-of-way takings. The maps were developed utilizing field data and title information provided by LADOTD. All project deliverables were prepared in accordance with Addendum A of the Location & Survey Manual.

TBS performed wetland delineation which were comprised of preliminary data gathering, field investigation, report preparation and coordination of a Jurisdictional Determination (JD). TBS also prepared Categorical Exclusions (CE) in accordance with the National Environmental Policy Act (NEPA) of 1969 and the President's Council on Environmental Quality regulations to implement NEPA. The CE documents included Solicitation of Views (SOV), purpose and need, description of alternatives, and an evaluation of the socio-economic and environmental consequences to be presented in the CE Checklist with supporting Appendices. TBS also prepared and submitted U.S. Army Corps of Engineers (USACE) Section 404 Permit/ NWP applications for the proposed bridge projects.

As part of an overall effort by LADOTD to reduce the amount of structurally deficient bridges throughout the state in order to meet FHWA metrics, LADOTD contracted TBS for the Rural Bridge Replacement Initiative, Phase I projects which replaced 47 bridge structures, primarily in North and Central Louisiana. The consultant contract was a complete turnkey project, and as the Prime, T. Baker Smith was responsible for nearly all contract services including inspection, surveying, ROW, preliminary and final bridge plans, preliminary and final roadway plans, construction services, scour analysis, hydraulic analysis, load rating and permanent signing for all 47 structures. TBS coordinated geotechnical investigation and design using sub-consultants. The replacement structures included box culverts, RC Slab spans, and LG-25 girder span bridges having clear widths ranging from 24' wide to 40' wide.

TBS established a project control network, researched existing subsurface utilities, and collected topographic data to aid in hydraulic analysis and design of replacements bridges at each site. The topographic surveys extended along the road for 500' feet from each end of bridge and along the creek for 150 feet upstream and downstream of said bridges. Terracon Consultants, Inc. (Terracon) was retained by TriCoeur Services, LLC (client) to perform a Waters of the U.S. (WOTUS) delineation on property located along Plettenberg Road in St. Francisville, West Feliciana Parish, Louisiana. The approximately 5.16-acre site primarily contains wooded land, with a tributary of Polly Creek bisecting it north to south. Terracon characterized the existing site conditions, observed the site for the presence of aquatic resources, including wetlands, and provided an opinion regarding whether or not aquatic resources (if observed) would be considered jurisdictional by the United States Army Corps of Engineers (USACE). Terracon prepared a Waters of the US (WOTUS) Delineation report based upon findings obtained during field delineation. Terracon recommended consultation with the USACE for review and verification of the WOTUS Delineation to obtain a Preliminary Jurisdictional Determination (PJD) Request.

Terracon Consultants, Inc. (Terracon) was subcontracted to perform wetlands delineations for the off-system bridge contract for LADOTD. The project site is located at East State Street over Corporation Canal, in Baton Rouge, East Baton Rouge Parish, Louisiana. Topographic maps, National Wetland Inventory maps, aerial photographs, soil data from the Natural Resources Conservation Service, as well as flood insurance maps were reviewed prior to conducting the field delineations as background research. This project involved a concrete lined canal rather than a natural stream, with no additional wetlands adjoining. Terracon prepared a Waters of the US (WOTUS) Delineation report based upon findings obtained during field delineation. Terracon recommended consultation with the USACE for review and verification of the WOTUS Delineation to obtain a Preliminary Jurisdictional Determination (PJD) Request.

Describe the project including the firm's role and members involved. (Highlight staff to be used in this proposal.)

Terracon Consultants, Inc. (Terracon) was subcontracted to perform wetlands delineations for the off-system bridge contract for LADOTD. Terracon prepared a Waters of the US (WOTUS) Delineation report based upon findings obtained during field delineation of the 0.536-acre site within the project area of a proposed bridge replacement located on Cleve Kennedy Road in Franklinton, Washington Parish, Louisiana. Topographic maps, National Wetland Inventory maps, aerial photographs, soil data from the Natural Resources Conservation Service, as well as flood insurance maps were reviewed prior to conducting the field delineations as background research. The area adjoining the creek was surveyed for possible wetlands using soil sampling and vegetation surveys, however no additional wetland areas (other than the creek itself) were identified. Terracon recommended consultation with the USACE for review and verification of the WOTUS Delineation to obtain an Approved Jurisdictional Determination (AJD) Request.

Key Members: Jim Baxter and Melissa Savoy

## 18. Approach and Methodology:

## **INTRODUCTION**

The professional staff provided by the TriCoeur Services, L.L.C. (TriCoeur) team offer over 4 decades of LADOTD design experience including Off-System Bridge Replacement (OSBR) experience with a proven record of project delivery for the OSBR program since our Firm's inception 12 years ago. Our Team has worked together providing topographic surveys, environmental / wetland delineations, and plan preparations for OSBR projects involving both standard plan and (frequent) non-standard structures while working to maintain close accord with current LADOTD procedures, design criteria, reference manuals, guidelines, and checklists.

TriCoeur's team is led by Barry Gahagan, PE, PLS with over 40 years of design experience primarily in service to LADOTD. Since TriCoeur's inception in 2010 Barry has served as project manager on 9 LADOTD bridge replacements, as well as 5 Parish bridge replacements in general conformance with OSBR coordinating with other federal funding sources. Barry's design and project management experience includes both On and Off-System bridges ranging from very low volume rural to major arterial / Interstate interchange structures. TriCoeur's survey subconsultant T. Baker Smith is led by Jean Reulet, III, PLS with the dozens of LDOTD and survey projects of various sizes across Louisianas since 2011. TriCoeur's team includes Terracon who has a significant history of performing environmental (SOV, JD, & Wetland Delineation) services for LADOTD.

## PROJECT UNDERSTANDING, SITE VISIT, & EXPECTED CHALLENGES

TriCoeur is familiar with the **Lower CC Road** bridge site located in East Feliciana Parish. We are familiar with and prepared to address project challenges, including curved approach alignment, intersection turnout in the bridge approach, utility, and traffic maintenance and access concerns.

Structure is located approximately 6.5 miles East of Clinton, LA.

## **KICKOFF MEETINGS**

Following the NTP, TriCoeur will meet with the OSBR Program Manager and staff to discuss the project, review the schedule, receive LADOTD field books, review any program guideline changes, invoice requirements, and establish communication protocols. Our project schedule will be based on critical path items with concurrent items being utilized to **expedite project delivery**.

TriCoeur will also meet onsite with **Parish** representatives prior to the start of topographic surveys consistent with the OSBR Guidelines. Additional items such as planned corridor improvements, hydraulics, structure preferences and corridor users will be discussed. Previous 5-years crash history will also be requested at this meeting. Meeting minutes for both meetings will be provided within 3 days of the meeting for review.

### **TOPOGRAPHIC SURVEY**

TriCoeur's engineering staff will work closely with survey staff during this phase to ensure that all required data is collected, completed, and reported in accordance with LADOTD Off-System Bridge Guidelines.

GPS control will be established using at minimum four (4) control points set in concrete with digital levels run with horizontal and vertical closure verified by conventional methods. Initial field data including existing bridge limits, channel and roadway limits will be shared with Engineering to facilitate existing alignment geometrics enabling stabling and alignment stakeouts in advance of roadway cross sectioning.

Bridge sketches will be prepared, and the channel traverses shown on the field roll. Channel sections will be of appropriate location and number sufficient both for accurate digital terrain modelling and for hydraulic modelling/analysis.

Survey data will undergo thorough QC/QA with review by both the surveyor, party chief and engineering project manager for completeness and accuracy prior to review submittal.

# PRELIMINARY PLAN PHASE DEVELOPMENT 50% STATUS & HYDRAULICS ANALYSIS

Hydrologic analysis will begin once site confirmation and channel / debris flow / design water surface / overtopping characteristics can be determined. Hydraulic analysis will follow with LADOTD authorization to proceed and in preparation of 50% Preliminary Plans.

## -Design Criteria

TriCoeur will review the 5-year crash history of the site provided by the Parish to determine the roadway's performance. The roadway is a dead-end service primarily to boat camps. Alternative travel paths are apparent which may facilitate crossing closure for replacement construction. Traffic maintenance alternatives will be confirmed with Parish representatives at kickoff. Anticipated design criteria and LADOTD Design Report will be submitted for review and approval, guiding the remainder of plan development.

## -Hydraulics & Scour Analysis

TriCoeur will begin the hydraulics and scour analysis by reviewing additional data including topographic maps, FEMA Firm maps, USGS Quadrangle maps and LiDAR to delineate the site's drainage characteristics. Peak discharges for this site are expected to based on coastal flowing conditions. Surface elevations will be generally developed using conventional software including LADOTD's HYDR1130 and HECRAS. Hydraulic design will be conducted in accordance with the LADOTD Hydraulics Manual; as applicable, with results reported; including the Hydraulic Data table. In this coastal site the bridge hydraulics are not anticipated to affect existing land use.

## -Bridge Type Considerations

The bridge Type, Size and Location which will determine the appropriate bridge length, revetment slopes and hydraulic opening will be developed at the start of the hydraulics analysis. An RCB may be analyzed as a potential replacement structure option. If needed, TriCoeur's staff has the experience and design tools to perform non-standard bridge structure designs per LRFD methodology although none are anticipated for this site.

## -50% Preliminary Plans

Once hydraulic analysis and reporting is complete, the remainder of the 50% PP will be developed including the roadway design horizontal and vertical geometry, guardrail, roadside drainage considerations, cross-sectional geometrics and transitions. The roadway will be modeled to determine the limits of construction. Plans

TriCoeur Services U.C.

will be developed in accordance with LADOTD plan preparation and OSBR Guidelines. Should Design Exceptions or Waivers be recommended, Draft forms will be submitted for DOTD and Parish consideration.

## 75% STATUS (PRE-PIH) & SOLICITATION OF VIEWS (SOV's)

Following the 50% Preliminary Plan review, TriCoeur will address all comments and will; unless otherwise directed, advance plans to a Pre-PIH review status. Should this project's scope clarity be confirmed at the 50% status this proceed to Plan in Hand without the submittal of Pre-PIH plans, aiding in project delivery. Upon approval of the replacement structure, TriCoeur and ELOS Environmental will prepare the Solicitation of Views (SOVs), receive LADOTD approval thereof and mail these to the recipient list provided by LADOTD Environmental Section. Responses will be logged and loops closed to all SOV responses.

## 95% STATUS (PLAN IN HAND)

Comments from the preceding review(s) will be addressed in the Plan in Hand submittal. The roadway model, typical sections, plan & profiles, general notes, general bridge plan, summary of estimated quantities, and construction signing will be developed from the previous plan submittal(s). No superelevation is anticipated for this tangent alignment. Standard Plan lists, cost estimate and the Constructability & Biddability Review form will be provided. TriCoeur will attend the Plan in Hand meeting onsite with LADOTD and Parish representatives. Meeting notes will be provided within one week of receipt of compiled participating stakeholder comments.

## 100% STATUS (POST PLAN-IN-HAND PRINTS)

Plan development will continue to progress as comments are addressed and major design elements are completed. Items discussed at the PIH meeting will be addressed and added to the plans per the PIH Meeting Memorandum.

### -Environmental

The wetland delineation will be initiated upon authorization and will be conducted onsite. A wetland findings report prepared in accordance with US Army Corps of Engineers (USACE) guidelines. A Preliminary Jurisdictional Determination (PJD) will be requested from the USACE upon report completion. Permit sketches sized 8.5"x11" will be prepared to accompany the wetlands report, SOV packet, and Environmental Determination Checklist.

## -R/W Sketches & Other Documents

TriCoeur will prepare the Right of Way Sketch per OSBR guidelines showing any required taking lines and anticipated parcels affected along with a draft of the R/W agreements. A draft utility conflict assessment will be provided to the Parish to aid in required utility relocations. In addition to the 100% Preliminary Plans, environmental package and R/W sketches, the Design Report forms will be finalized and sealed by TriCoeur's project manager. Checklists will be prepared and submitted. Pile length requests with all supporting documentation will be submitted at this stage for use by the geotechnical engineer.

# FINAL PLAN DEVELOPMENT 60% FP STATUS (PRE-ADVANCED CHECK PRINTS)

Following the environmental approval and receipt of the Notice to Proceed for Final Plans, TriCoeur will promptly develop detailed plan sheets including embankment widening details, geometric layouts (if required), erosion control plans, quantity summary sheets, Pile Data & Bent Elevation, and concrete surface finish. All bridge structure and pile cutoff elevations will be finalized. Any special design superstructure or substructure bridge elements or special approach slabs will be fully detailed and placed on bridge sheets. Bridge railing, joint and bearing details will also be completed. Should nonstandard structure /component be required for the site, a draft of the bridge calculations and Load Resistance and Factor Rating (LRFR) will be prepared at this stage to ensure adequacy of reviews.

TriCoeur Services U.C.

## 95% & 98% FP STATUS (ADVANCED CHECK PRINTS)

Comments from the Pre-ACP submittal will be reviewed with LADOTD and resolved/addressed. Additional details, notes or changes will be added to the plans and quantities will be completed. The ACP Plans will be provided to the Plan Quality Unit (PQU), if necessary. If necessary, an ACP review meeting will be held to ensure all comments are addressed. Upon resolution, 98% Final Plan plans will be prepared for review by the Chief Engineer and for use by General Files to prepare the proposal. TriCoeur will work with LADOTD staff to input pay items and quantities into AASHTOWARE and generate final cost estimates.

## 100% FP STATUS (TRACINGS)

TriCoeur will provide the 100% Final Plans (Tracings) as per OSBR Guidelines with the Title Sheet on Mylar for Chief Engineer signature. This submittal will be prepared once all comments are addressed from task managers, PQU and/ or the Chief Engineer. Parish granted Design Exceptions will be noted on the Title Sheet. A bound calculations book will be prepared and submitted with the original field books and an electronic copy of the Hydraulics Report.

## QUALITY CONTROL AND QUALITY ASSURANCE (QC/QA)

Each submittal will be accompanied by LADOTD QC/QA certification forms. Design and plan comments, along with their resolutions will be documented in TriCoeur's Design Comment Review forms.

## LETTING

TriCoeur will be available to assist LADOTD during letting including responses to Falcon questions.

Upon receiving the bid results and tabulations, TriCoeur can; upon request, provide additional information to LADOTD as needed regarding contract award, etc.

## **STAGE 5: CONSTRUCTION**

TriCoeur's staff will be available to assist LADOTD with Construction Support (if necessary) including RFI responses, attending meetings, and reviews of shop drawings, design review of construction modifications, and other such contractor submittals.

#### PROPOSED PROJECT SCHEDULE

TriCoeur Services LLC

## 19.Workload:

For all contracts where a firm on the team is a prime consultant or sub-consultant and where **a**) the consultant selection was made by DOTD, and **b**) a contract was executed by the consultant and the contracting entity by the date the advertisement for this proposal was posted, list all work meeting the following criteria:

- 1) one of the team's firms is responsible for the performance of the work;
- 2) authorization to perform the work has been provided, as provided in the contract between the consultant and the contracting entity;
- 3) the work has not yet been performed and invoiced; and
- 4) the work is not currently suspended for an indefinite period of time.

For indefinite delivery/indefinite quantity (IDIQ) contracts, list open Task Orders individually.

List only the portion of the fees attributable to firms on the team.

Firm(s) ALL FIRMS MUST BE REPRESENTED IN THIS TABLE	Discipline(s) *	Contract Number and State Project Number	Project Name	Remaining Unpaid Balance**

## QC procedures shall assure:

- 1) A supervisor or team leader is responsible for determining the necessary technical knowledge and experience of the designer/checker for that specific design; Designers & checkers are assigned to bridge projects by matching experience to project complexity.
- 2) All bridge plan sheets shall include the names or initials and dates of the appropriate designer and checker, and may include their signatures. Including the names or initials of the drafter and reviewer where appropriate. Sealing of the bridge plans by the engineer in responsible charge of the work will follow state requirements.
- 3) All relevant special provisions shall be identified by the appropriate author in responsible charge. Sealing of special provisions will conform with State requirements.
- 4) Design calculations, check calculations, hydraulic and geotechnical reports, review comments/resolutions and related documents as discussed (above) shall be retained in the permanent bridge design file with QC checklist, and cost estimates if prepared in the design file.
- 5) A documented program which details the procedures, standards, and policies to be used in the oversight of bridge design.

## QA procedures shall include:

- 1) Independent check of design calculations with depth and extent of this review commensurate with design feature size, complexity, and level of risk.
- 2) Participation in field engineering reviews during design, and when requested, during construction and in-service.

# **Design Criteria:**

- 1) Louisiana Department of Transportation and Development Off System Highway Bridge Program Guidelines Latest Edition
- 2) Reference Project Advertisement (Pg 5) Dated (December 2024)

## **Design Checklists:**

Louisiana Department of Transportation and Development - Off System Highway Bridge Program Guidelines - Latest Edition

- 1) Topographic Survey Checklist
- 2) Plan-in-Hand checklist
- 3) Design Report
- 4) Constructability/Biddability checklist

# PLAN / CONSTRUCTABILITY / BIDDABILITY REVIEW

(ADOPTED FROM LADOTD WITH MODIFICATIONS)

## **Purpose:**

- To provide information to assist in producing quality plans.
- To provide a history of information that is easily accessible.
- To provide questions to stimulate discussion of potentially problematic areas.
- To provide questions to stimulate checking details and items required to complete the project.
- To provide aid during design for QA/QC
- To provide primary discussion for the plan-in-hand meeting

## **Instructions for completing the form**

- The Design Review portion of the form shall be filled out by the designer during design and prior to PIH submittals.
- The form may be filled out by any district person (ADA, Area Engineer, Lab Engineer, etc.) but the Project Engineer must sign the signature sheet that he concurs with the comments. It is encouraged that the Area Engineer and the Project Engineer both review the plans.
- The Project Engineer and any District personnel designated by the Project Engineer are responsible for reviewing the plans and filling out the review form. The Project Engineer and all reviewers must sign the signature sheet at the back of the form. The Area Engineer is also encouraged to review the plans.
- If answer to the question is in blue box (or lightly shaded if in black and white), a comment is **NOT** required.
- Most questions are designed that a "NO" answer will require comments on what is missing or needed.
- Most questions are designed that a "YES" answer means the plans meet the project needs or a follow up question is required.
- Comments should be shown by reference number on notes page for easy reference. (Example III-2)
- Constructability and Plan-in-Hand questions shall be answered prior to the Plan-in-Hand. The plans should provide enough detail to construct the work required.
- ACP and PS&E / Biddability submittal shall have copies of the completed PIH review attached. If missing contact the Project Manager for a copy. The plans and specifications should provide the details and pay items to bid the project.
- Project Managers are required to respond to all comments and copy all reviewers.
- Each review is considered complete when all comments are addressed
- If question is answered N/A, question is not applicable to project.
- 95% Final Plan reviews (ACP) shall have the completed 95% Preliminary Plan (PIH) review attached. It may be helpful to reference the PIH plan set during the ACP review.
- Comments may be required for certain checklist items. Comments are to be written at the back of the form along with reference numbers for the plan section and checklist item number.

Project managers shall collect all review forms, insert responses to any comments, and copy all reviewers.

	Does profile fit the terrain?										
IV. DRA	NINAGE INFORMATION										
1.	If subsurface drainage is being used, is there any evidence of effluent sewerage entering existing roadside ditches?										
	1a. If yes, what is the plan of action										
2.	Is adequate outfall information shown?										
3.	Has sufficient drainage excavation and/or cleaning of outfall lateral required for adequate drainage been shown?										
	3a. If yes, who is cleaning laterals (City, Parish)?										
4.	Will cleaning be required for existing drainage structures?										
	4a. If yes, are pay items included?										
5.	Will special ditch protection items be required?										
	5a. If yes, identify type										
6.	Have existing drainage patterns, their continuity, and high water indications been identified?										
7.	Are ditches compatible with existing and proposed drainage structures?										
8.	Is design drainage elevations shown in the plan compatible with the existing conditions?										

Description		Design				Co	nstruc	tion		
	Review/ Plan-in-Hand Constructability				-	A			S&E ability	
<b>✓</b>	N/A	Yes	No	N/A	Yes	No	Yes	No	Yes	No
9. Is there a provision for temporary drainage?										
10. Is water being trapped on the lanes on travel lanes which are to be maintained during construction?										
11. Is there a method to connect new and existing drainage facilities?										
<ul><li>12. Is a second profile sheet required for right and left of centerline?</li><li>V. SIGNAL PLANS – Not Anticipated for this Project (Review with Traffic Engineer)</li></ul>										
1. SIGNAL I LANG INCOMMENTATION AND INCOMMENTATION CONTINUED INCOMMENTATION CONTINUED AND INCOMMENTATIO										
Are pole locations in conflict with utilities or drainage structures?										
2. Are a controller, signal head, pull box, and pedestrian poles required?										
3. Is the existing controller compatible to added items?										
4. Are overhead power lines in conflict with span wire?										
5. Will fiberglass insulators be required or relocated?										
6. Are signs attached to the overhead span wire for the existing traffic signal?										
7. Is the disposition of existing signal poles and signal equipment identified?										
8. Is the sidewalk being obstructed by signal equipment access?										
9. Does the foundation match requirements for span lengths/mast arms?										
9a. If yes, are details provided?										
10. Are street name signs included on mast arms?										
10a. If yes, are details provided?										
11. Are communication cables overhead?										

Description		Design	1			C	onstruc	tion		
	Review/ Comments			Constructability			A	_		S&E ability
<b>✓</b>	N/A	Yes	No	N/A	Yes	No	Yes	No	Yes	No
11a. If yes, will they fit with overhead electric?										
12. Do loop detectors exist?										
12a. If yes will existing loop detectors be destroyed by construction?										
12b. If loop detectors are being replaced, are all pay items included (i.e. conduit, junction boxes, conduit, etc.)?										
12c. Will cameras be added?										
13. Is jacking and boring required?										
14. Is open trenching required?										
15. Is right-of-way adequate for signal equipment? (e.g. for signal and lighting foundations, utility relocations, construction easements, adequate work space, desirable clear zone, etc.)										
16. Are temporary traffic signals required?										
16a. If yes, who will be responsible?										
VI. GEOMETRIC DETAILS										
Have all areas where improvements can be made to alignment been addressed?										
<ol> <li>Are sight distances adequate at intersections? (r/w flares, obstructions, etc.)</li> <li>Is the required information shown on the geometric sheets (e.g. curve data, sight distance, vertical datum, centerline, etc.)</li> </ol>										
4. Is existing access being denied due to inadequate sight distance?

~		N/A	Yes	No	N/A	Yes	No	Yes	No	Yes	No
VII. SE	QUENCE OF CONSTRUCTION & CONSTRUCTION SIGNING										
1.	Is through traffic to be maintained?										
	1a. If no, is a detour provided?										
2.	If local traffic only, are sufficient details and items provided for school buses, mail carriers, emergency vehicles, or other local traffic to be maintained.										
3.	Is temporary sheeting required to maintain existing/required travel lanes?										
	3a. If yes, are specifications and details provided?										
	3b. If yes, is method of payment satisfactory?										
4.	Are there conflicts between new and existing roadway used to maintain traffic?										
5.	Are traffic control plans for the bridge coordinated with roadwork phasing?										
6.	Can utility crossings be resolved via scheduling restrictions (i.e. weekends, after hours) or temporary structures?										
7.	Do utilities conflict with required special construction sequencing?										
8.	Are traffic operations requirements properly addressed? (i.e., signing, pavement markings signal, etc.)										
9.	Are lanes on which traffic is to be maintained compatible to local conditions?										
	Is there sufficient clearance within the work zone for the operations (such as crane swing room)?										
11.	Are there adequate accommodations for intersecting and crossing traffic?										
	Have pedestrian and bicycle accommodations been addressed?										
13.	Has a method of containing bridge slopes during phased construction (at end bent) and approach grade separation been identified?										

Description		Design	)			Co	onstruc	tion

<b>✓</b>	N/A	Yes	No	N/A	Yes	No	Yes	No	Yes	No
14. Have restrictions (e.g. lane closure, general construction or peak-hour restrictions in urban areas) been identified?										
15. Are there notes covering pay for traffic control items?										
16. Is the Traffic Control Plan clear, complete, and approved?										
17. Are items for temporary safety devices, requirements and provision (i.e. guardrail, attenuators, barrier rails, etc.)?										
18. Have the traffic control signs, warning devices and barricades been located?										
-Scheduling & Construction Phasing										
<ol> <li>Is scheduling and phasing coordinated with activity needs? (Schools, festivals, harvesting, parallel routes, etc.)</li> </ol>										
Will staging areas be provided to contractors that will accommodate the sequence of work and work areas?										
3. Is the type and limits of fence for temporary construction servitude identified?										
4. Have requirements for local/state/federal special permits been addressed?										
5. Is existing access being denied by obstacles (walls, guard rails, etc.) or grade differentials to adjacent property?										
6. Is safe pedestrian access and access to business and residences provided?										
-Detours										
Is detour facility clearly depicted?										
Do the detour limits conflict with roadway improvements?										
Is method of payment for detour satisfactory?										
4. Can detours be built with grade change between new and existing roadways?

~		N/A	Yes	No	N/A	Yes	No	Yes	No	Yes	No
5.	Is traffic addressed on side streets?										
6.	Is night work required?  6a. If yes, are hours and/or restrictions shown?										
VIII. G	ENERAL										
1.	Are appropriate general notes and special provisions required for construction provided?										
2.	Is there adequate construction access for demolition?										
3.	Are there adequate provisions if signs or road markers are to be removed?										
4.	Are contamination sites delineated?										
5.	If there is a contamination site, have utility relocations been addressed?										
6.											
7.	Have environmental safeguards or dust control, erosion, and disposal of wastes been addressed?										
8.	Are there provisions for noise abatement (e.g. permanent noise walls)?										
	Do conflicts exist between landscaping and planting requirements with utilities (e.g. irrigation lines) and billboards?										
10	Is there sufficient space (25'-30') for power mowers between additional trees that are planted?										
	Is there an erosion control plan provided? (to be provided in Final Plans)										
12	Where pile driving is to be encountered near existing structures, should pre- existing conditional survey (video/pictures) be performed on the existing structures?

12a. If yes, are items provided?											
13. Did you create any S-item wording?											
IX. UTILITIES											
<ol> <li>Will there be disruptions of utilities and provisions for restoration?</li> <li>If utilities are outside of limits of construction but within the r/w, have all parties (including utility owners) agreed to allow them to remain in-place?</li> </ol>											
<ul><li>3. Has responsible party for utility relocation been identified with provisions?</li><li>4. Are there overhead utilities, guy wires, etc. in potential conflict with operations and access of large equipment?</li></ul>											
5. Are there gas lines above other utilities?											
6. Are there conflicts between gravity and force sewer mains and construction? 6a. If yes for force main, is there a utility agreement for relocation?											
6b. If yes for gravity sewer, are plans included for relocation of sewer?											
<ul><li>7. Are there utility conflicts with drainage?</li><li>8. If project is preceded by clearing and grubbing contract, have utilities been relocated?</li></ul>											
9. If there are pipelines, are they shown in the profile?											
10. If there is a need for a specified utility corridor?  10a. If yes, is it shown?											
11. Should an integrated utility relocation plan (scheduling and final location of utilities) be included in the construction plans?

11a. If yes, is the integrated utility relocation plan included in the construction plans?										
X. STRUCTURES										
GENERAL NOTES, INDEX, AND BRIDGE SUMMARY OF QUANTITIES										
-GENERAL NOTES & INDEX										
Is information complete, accurate, clear and free from multiple interpretations?										
2. Have all environmental commitments been identified?										
3. Has the disposition of salvageable materials been addressed?										
4. Are utility permit requests addressed?										
-BRIDGE SUMMARY OF QUANTITIES										
Are all necessary items shown and properly footnoted?										
2. Are all quantities and units adequately shown?										
3. Have all items been brought forward properly to the Master Summary of Quantities?										
4. If the project is composed of multiple project numbers or funding sources have the quantities been subdivided?

5. Have all non FHWA participating items been identified?												
-GENERAL BRIDGE PLANS												
<ol> <li>Are all geometric controls shown and consistent with other sheets?</li> <li>Does each plan sheet provide a clear layout and configuration of the intended structure (matchlines, span/bent numbering, joint types, etc.)?</li> </ol>												
3. Does the roadway and bridge interface agree?												
4. Has all guard rail installation information been shown?												
5. Are vertical clearances shown (navigable waterways, roads under bridge, etc.)?												
6. Is deck drainage type specified (drain holes, barrier slots, etc)?												
-HYDRAULIC DATA												
Is the hydraulic table shown?												
2. If river gauges are present, has the removal and disposition of these gauges been addressed?												
3. Has predicted scour, scour protection and abutment protection been adequately addressed?												
4. Have design water surface elevations been shown?												
5. Do all water surface elevations reference the project survey datum?												
6. Have any channel changes been addressed in the plans?												
-GEOTECHNICAL INFORMATION (If not addressed on foundation plan)

<ol> <li>Have all borings, CPT, test piles, and settlement plates been shown on the plans?</li> </ol>										
2. Has all temporary shoring for phased construction been covered adequately?										
3. Is Pile Batter indicated (if not shown on bent details)?										
CONSTRUCTION CONFLICTS										
Is the existing structure shown?										
2. Are all utilities to remain shown?										
-SUPERELEVATION DIAGRAMS										
(Superelevation implementation plans should always be included when superelevation										
transition occurs on the bridge. The bridge superelevation will control the design.)										
Is the superelevation implementation plan clear and concise?										
2. Is the transition from roadway to bridge clearly conveyed?										
-FOUNDATION PLAN										
(A foundation plan may be used when geometry is complex, additional information is										
required for layout of foundation or conflicts with foundation construction need to be identified)										
Has all temporary shoring for any phased construction been covered adequately?										
2. Are all conflicts identified in the plans?

2.	Are there any special requirements that need to be addressed in the plans for the construction of a bridge over a navigable water way or roadway? (These requirements may be related to agreements with the USCG, COE or for purposes of maintenance of traffic)												
3.	Are there any access issues that may affect the contractors' construction of the bridge or demolition of the existing bridge that have not been addressed in the plans?												
4.	Is the water depth at the site of sufficient depth to float barges?												
	Will barges obstruct navigation?  Are all environmental commitments being met by the proposed construction methods? (These commitments should be noted in the General Notes section of the plans)												
7.	Has the removal of the existing bridge been adequately coordinated with the permitting agencies and any special requirements covered in the plans?												
-Constr	uction Site Access												
1.	Are there any access issues the contractor may have for the delivery of materials to the project site? (Posted bridges)												
2.	Are there any driveways or property entrances that will have to be maintained during construction, relocated and / or reconstructed?												
3.	Will any work bridges or haul roads be required for the construction of the bridge?												
	Is there sufficient right of way to construct the bridge structures?												
5.	Are there any other construction related issues that will affect the constructability of the project that needs to be accounted for in the construction estimate?												
6.	Are there any utilities supported on the structure that need to be addressed in the plans?
