

## Example Statement of Likelihood for NEPA Document and Noise Study

Preliminary indications are that noise barriers are likely at the following locations.

Likely Barrier Location (begin & end points)	Average Barrier Height	Estimated Insertion Loss (first row)	Estimated Cost

The final decision on the implementation of noise barriers will be made by the Department during project design. If during final design conditions substantially change that impact the implementation of likely barriers, the Department will solicit the viewpoints of those affected as part of the reevaluation of reasonableness. Only barriers determined to be both reasonable and feasible will be constructed. Barriers that are no longer reasonable and feasible will be removed from the project.
