Anticipated NEVI Procurement Site Segment Maps

Louisiana Department of Transportation & Development

National Electric Vehicle Infrastructure (NEVI) - Round 1 Procurement

November 2026

This document presents maps of the 14 anticipated **Louisiana (LA) NEVI Site Segments** expected to be included in the first round of the Louisiana Department of Transportation and Development's (LA DOTD) National Electric Vehicle Infrastructure (NEVI) procurement.

A **LA NEVI Site Segmen**t is a defined section of Louisiana's designated Alternative Fuel Corridors (AFCs), which are FHWA-designated highway routes intended to support a national network of alternative-fuel charging infrastructure. The 14 anticipated site segments identify priority areas where NEVI funding may be used to install new or expand existing publicly accessible DC fast-charging stations.

For each **LA NEVI Site Segment**, proposers may submit one or more proposed charging locations within five miles of the segment (e.g., a private commercial property with convenient corridor access), in accordance with the forthcoming RFP instructions. LA DOTD anticipates selecting up to one awardee per site segment, with each segment treated as a separate procurement opportunity.

The maps provided in this document are intended for informational and planning purposes only. Final procurement requirements, evaluation criteria, and eligible site segments will be detailed in the forthcoming RFP. LA DOTD retains the right to change the location and boundaries of a NEVI site segment in advance of the official RFP release. Any changes will be communicated on the LA DOTD NEVI website in writing and will be publicly available.

For any questions or comments, please contact DOTD.EVProgram@la.gov.
